

Evoluzione settimanale delle vaccinazioni in Lombardia

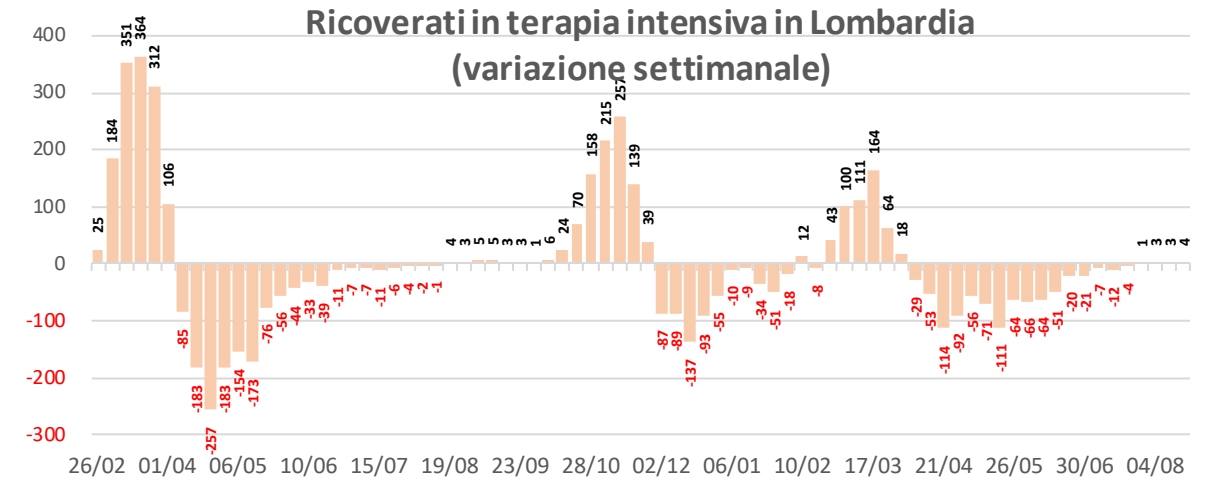

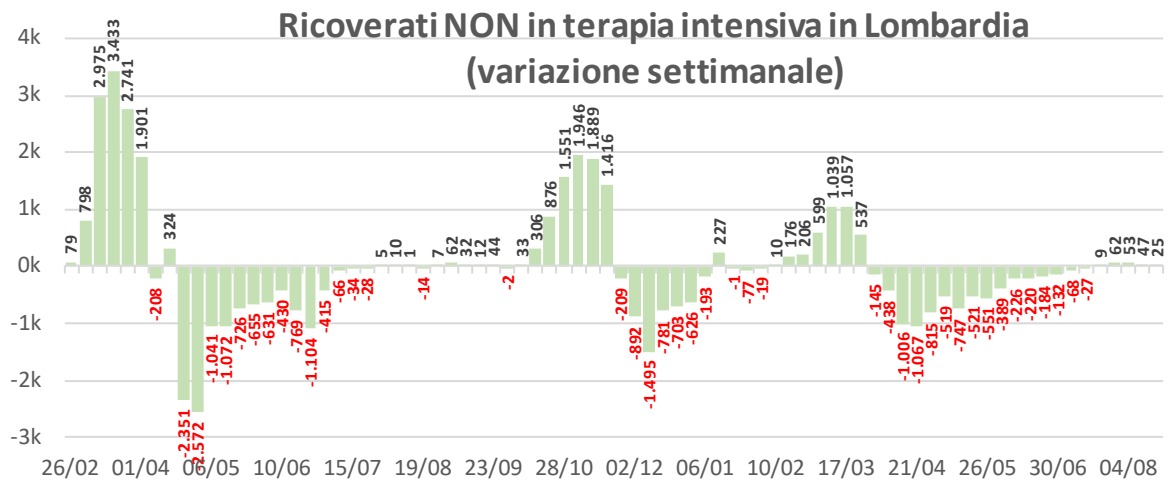

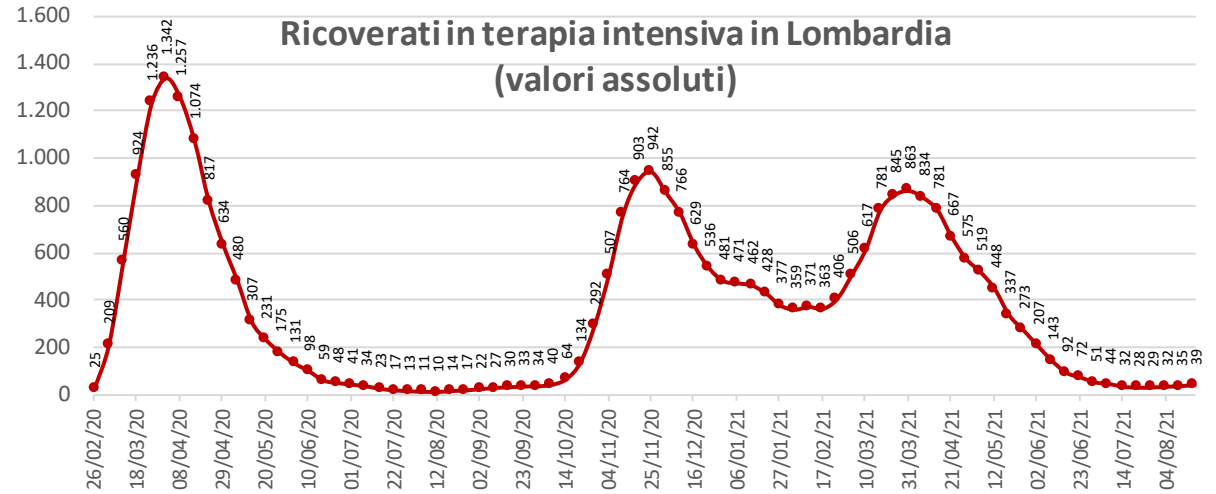

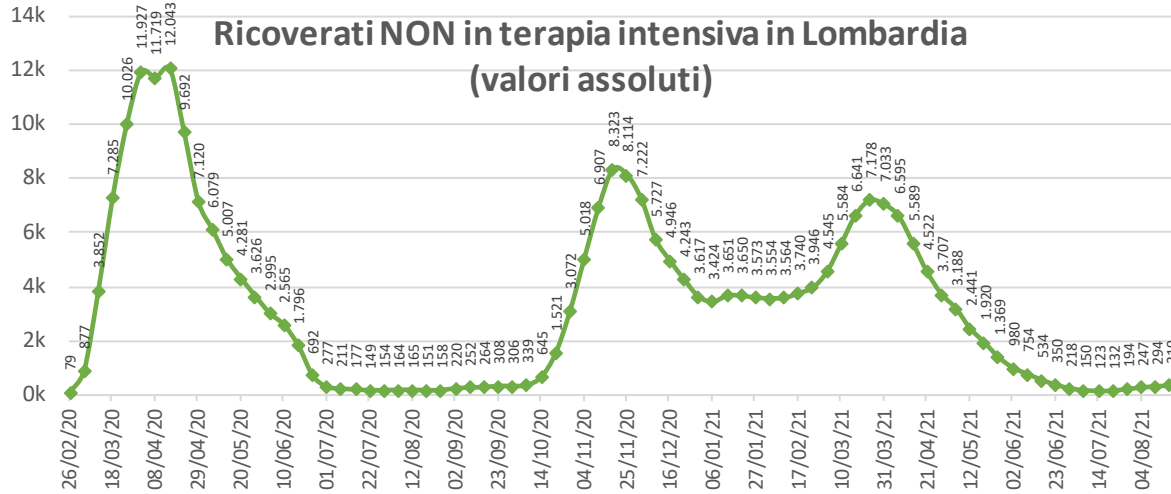

**Materiale preparato da Samuele Astuti sulla base dei dati ufficiali pubblicati dalla
protezione civile**

Versione aggiornata ai dati di mercoledì 18 agosto

Numero di Casi Positivi e Deceduti

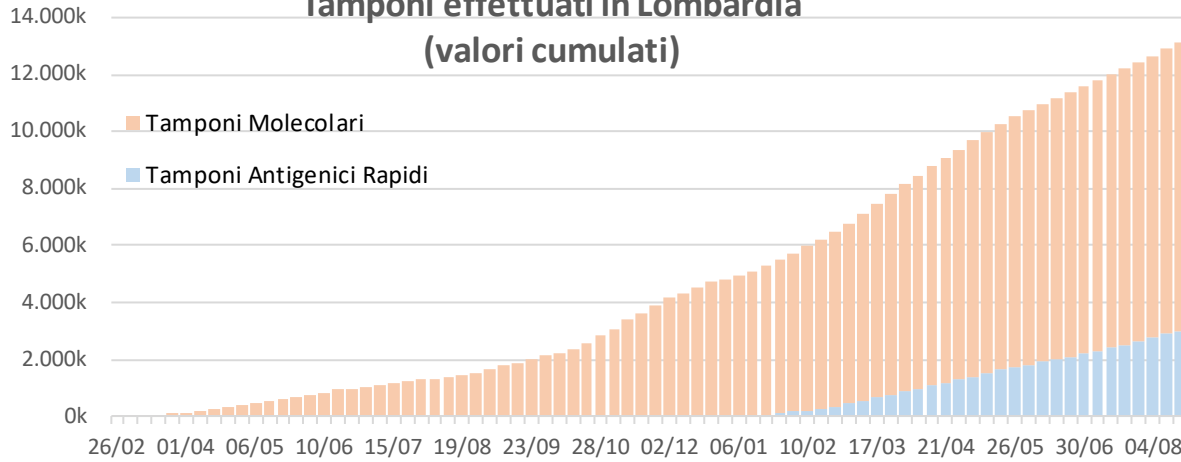

Ricoveri

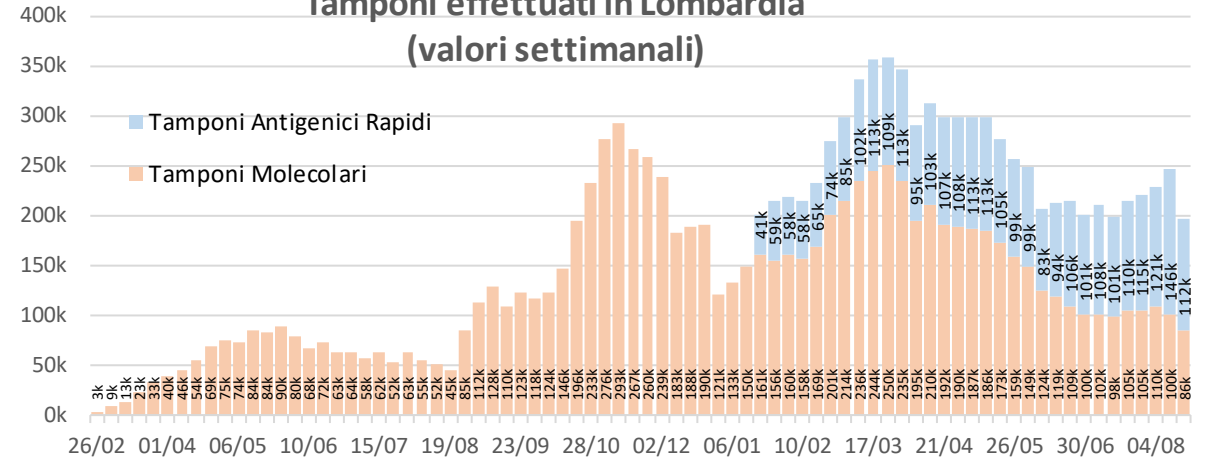

Tamponi

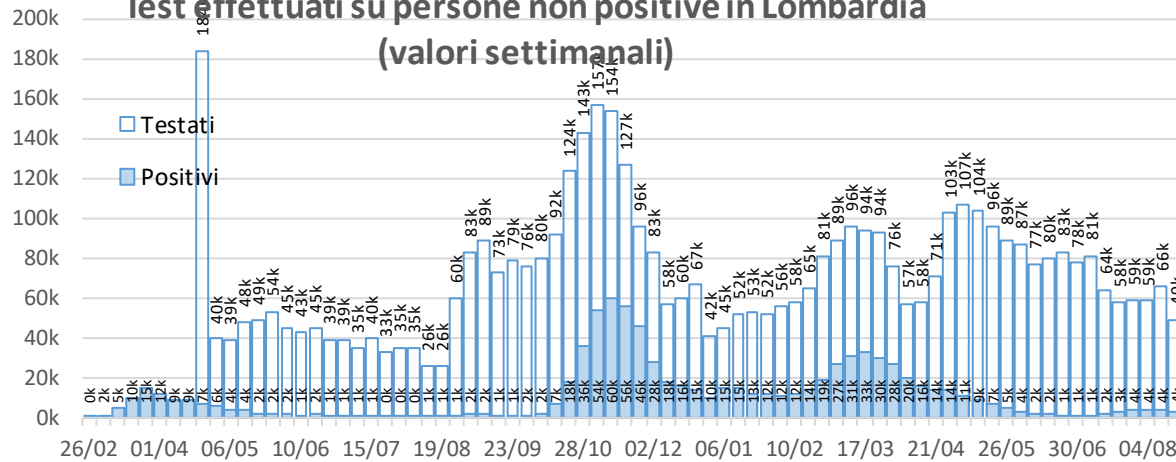

Tamponi effettuati in Lombardia (valori cumulati)

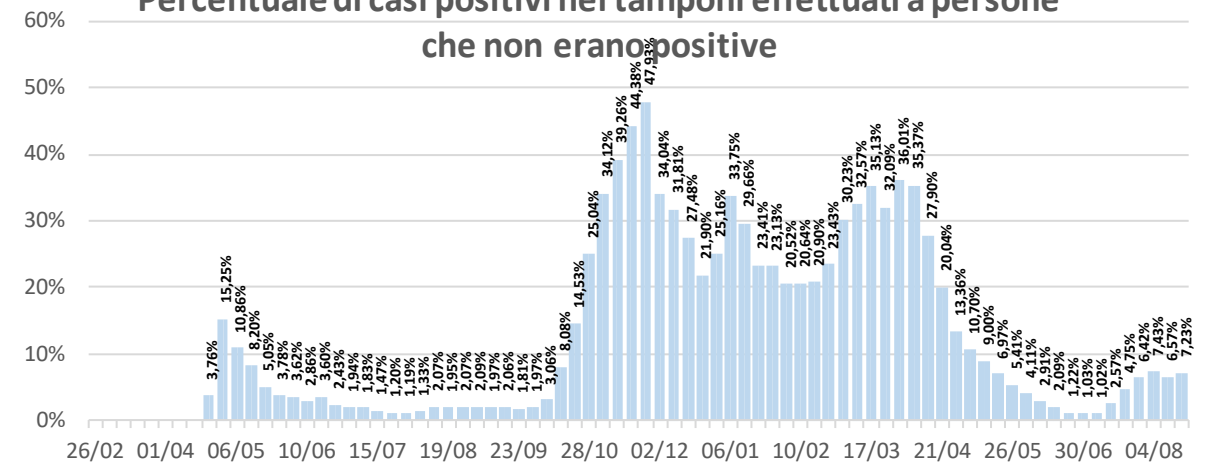

Tamponi effettuati in Lombardia (valori settimanali)

Test effettuati su persone non positive in Lombardia (valori settimanali)

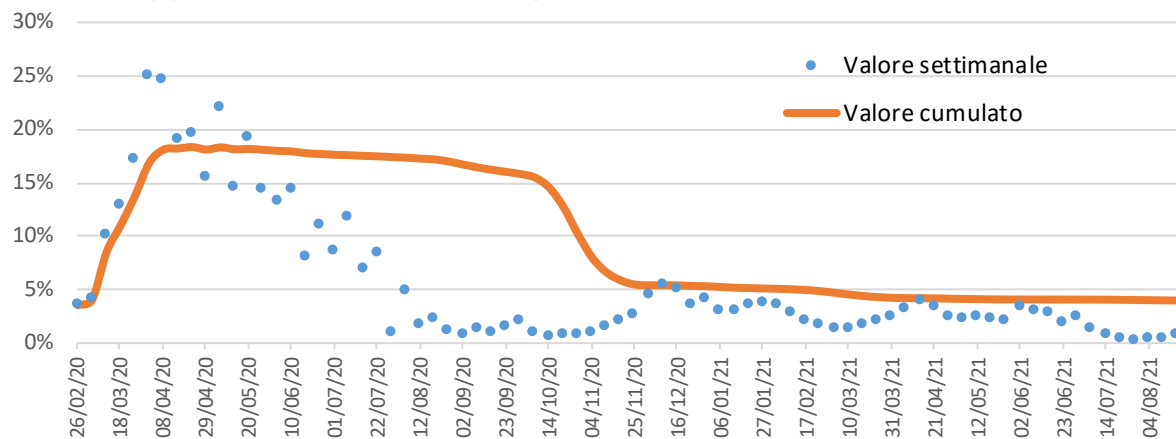

Percentuale di casi positivi nei tamponi effettuati a persone che non erano positive

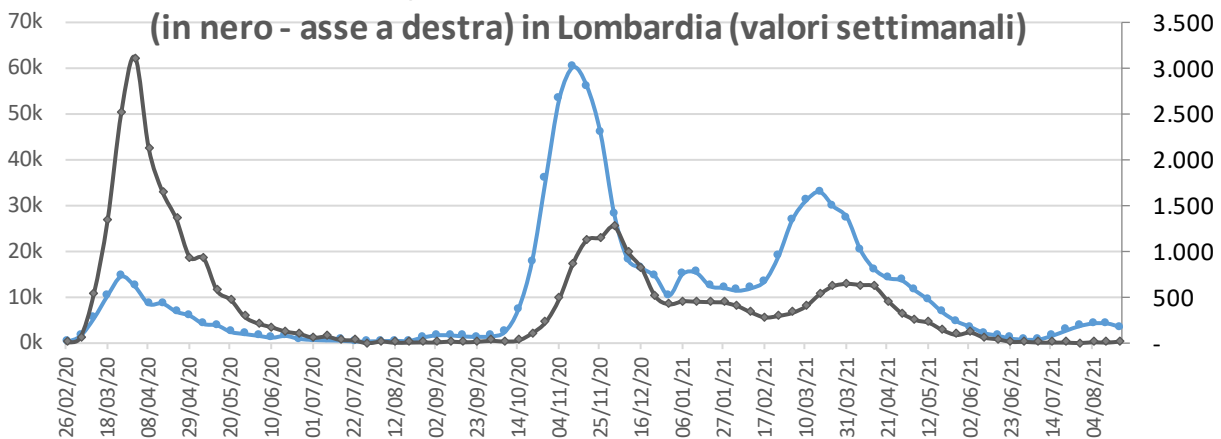

Confronto decessi, casi positivi e ricoveri TI

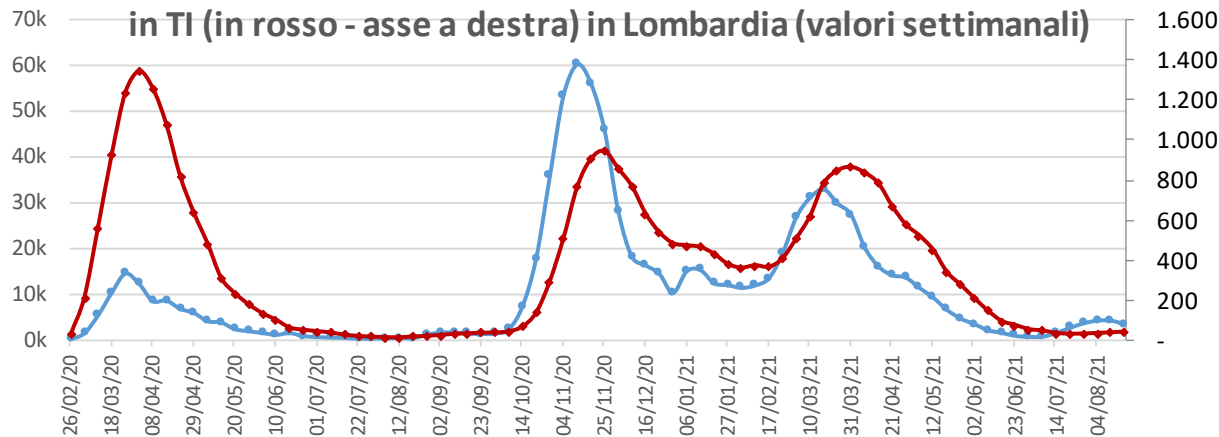

Rapporto tra decessi e casi positivi in Lombardia

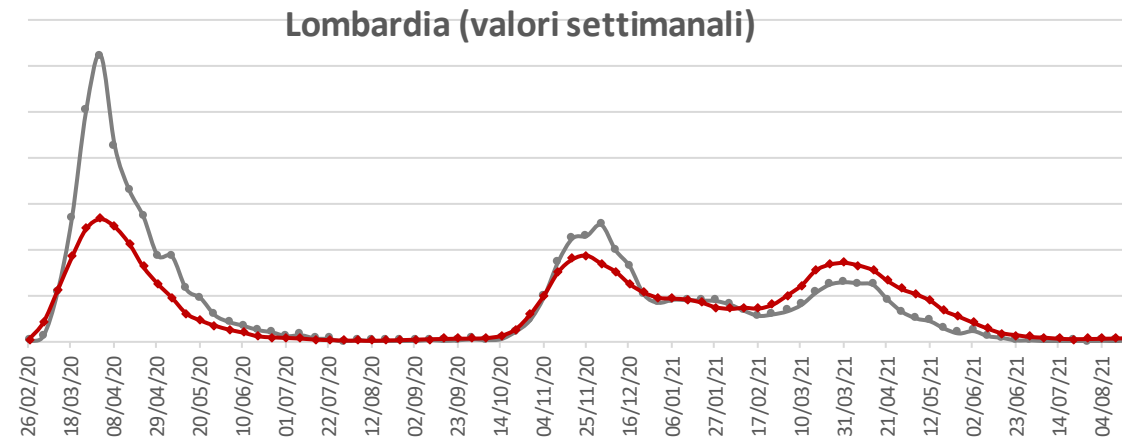

Confronto tra casi positivi (in blu - asse a sinistra) e deceduti (in nero - asse a destra) in Lombardia (valori settimanali)

Confronto tra casi positivi (in blu - asse a sinistra) e ricoverati in TI (in rosso - asse a destra) in Lombardia (valori settimanali)

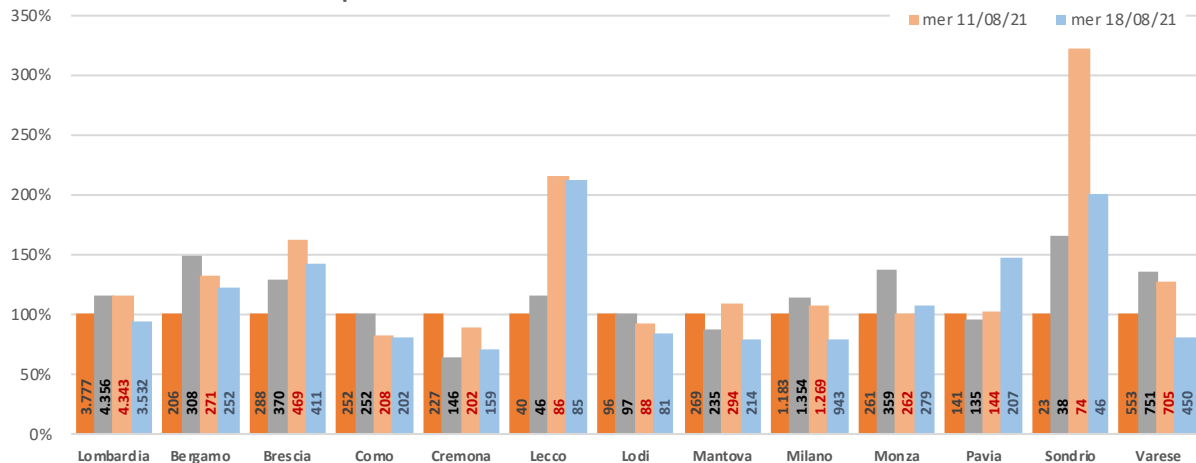

Confronto tra decessi (in nero) e ricoverati in TI (in rosso) in Lombardia (valori settimanali)

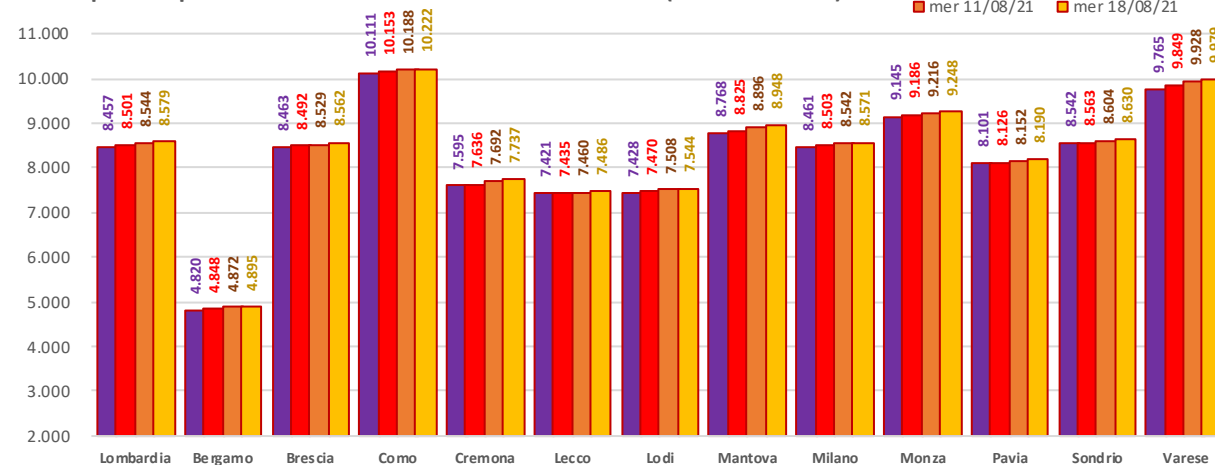

Sintesi andamento delle province lombarde

Andamento relativo dei casi positivi nelle ultime settimane

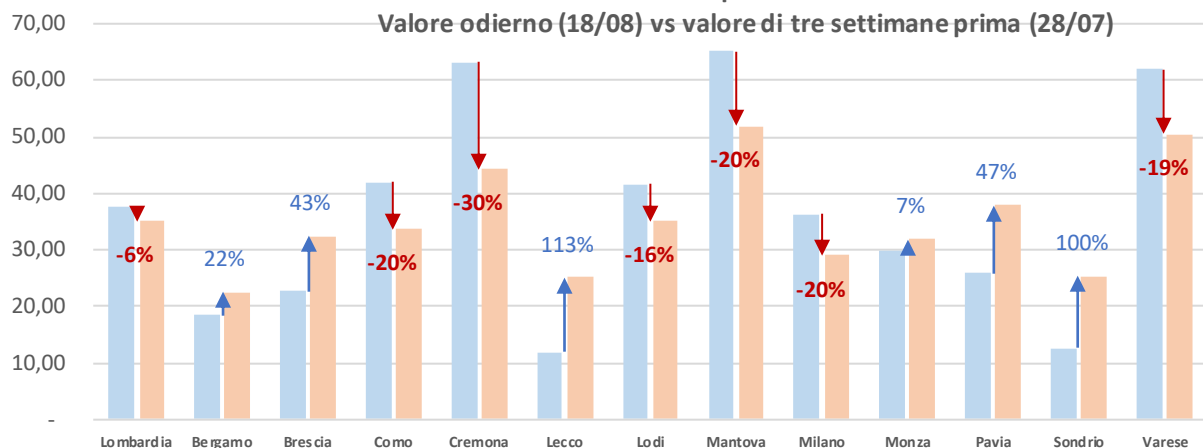

Casi positivi per 100.000 abitanti nelle ultime settimane (valori cumulati)

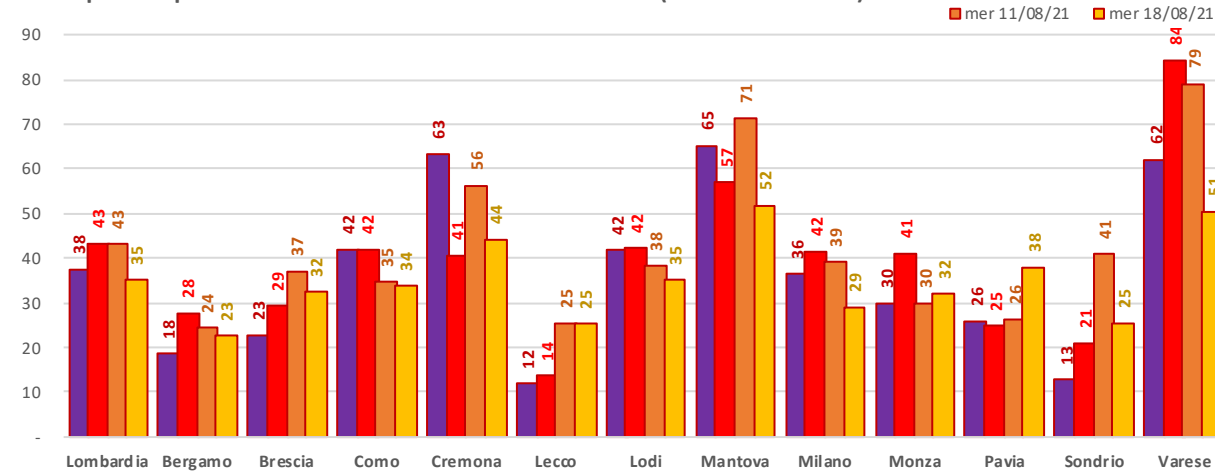

Casi settimanali per 100.000 abitanti

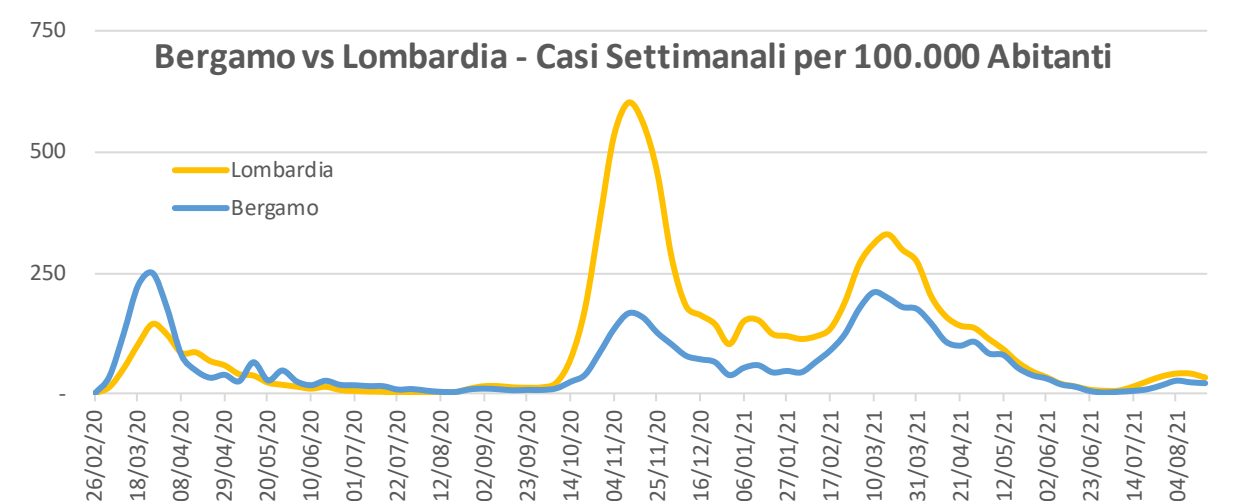

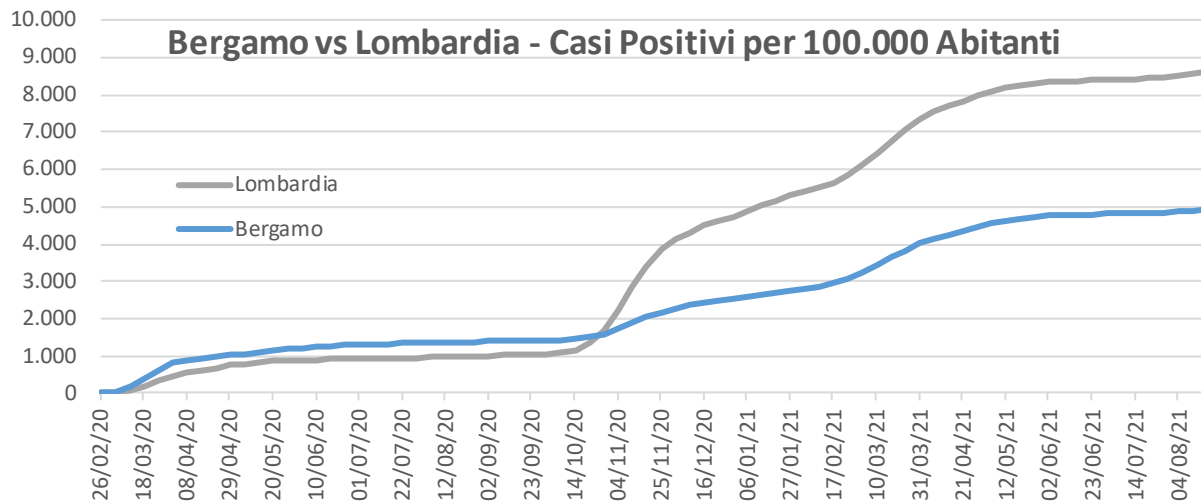

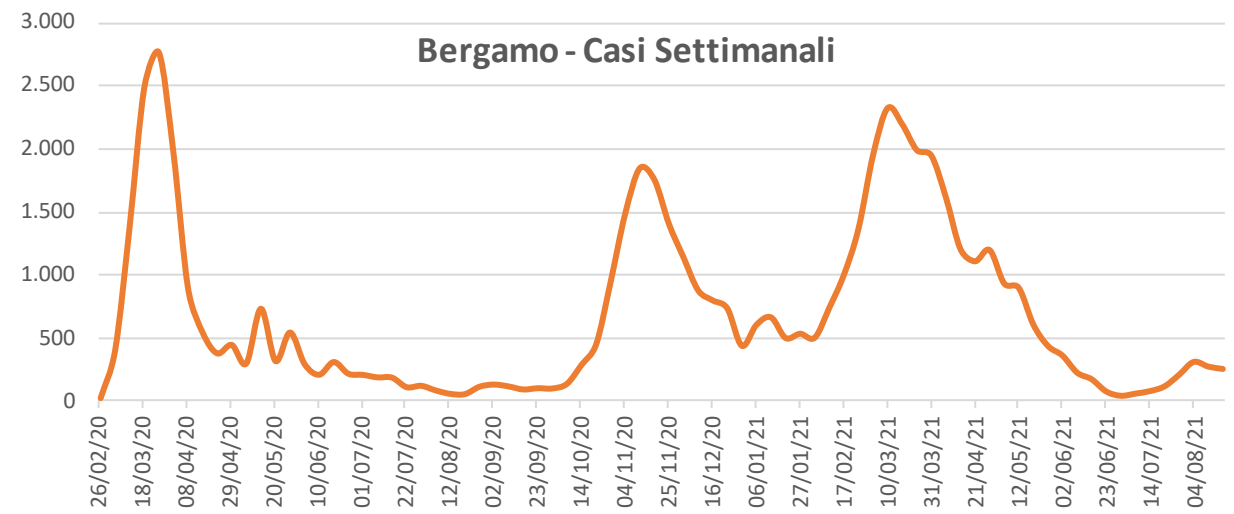

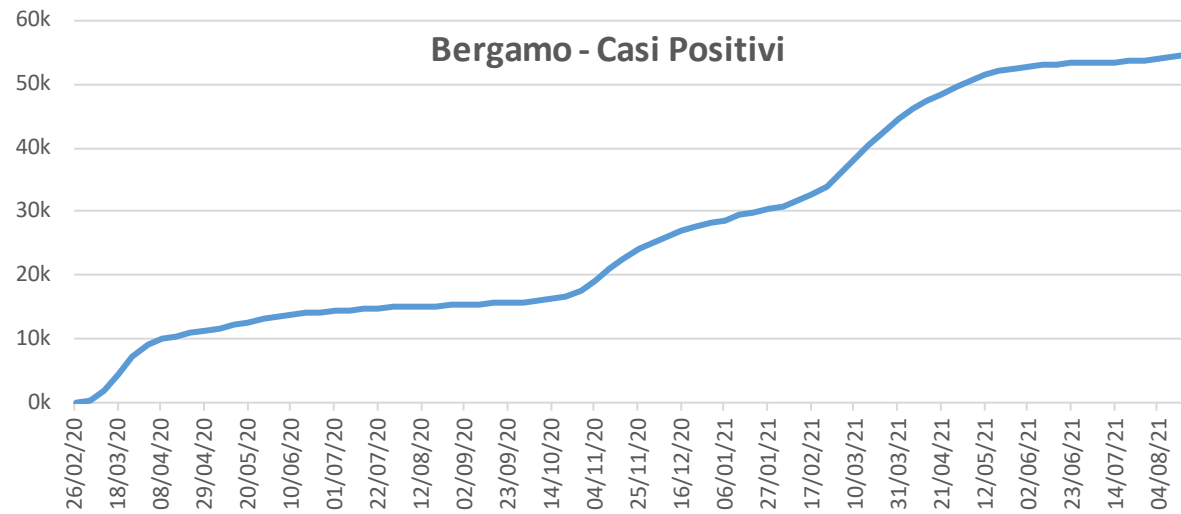

Valore odierno (18/08) vs valore di tre settimane prima (28/07)

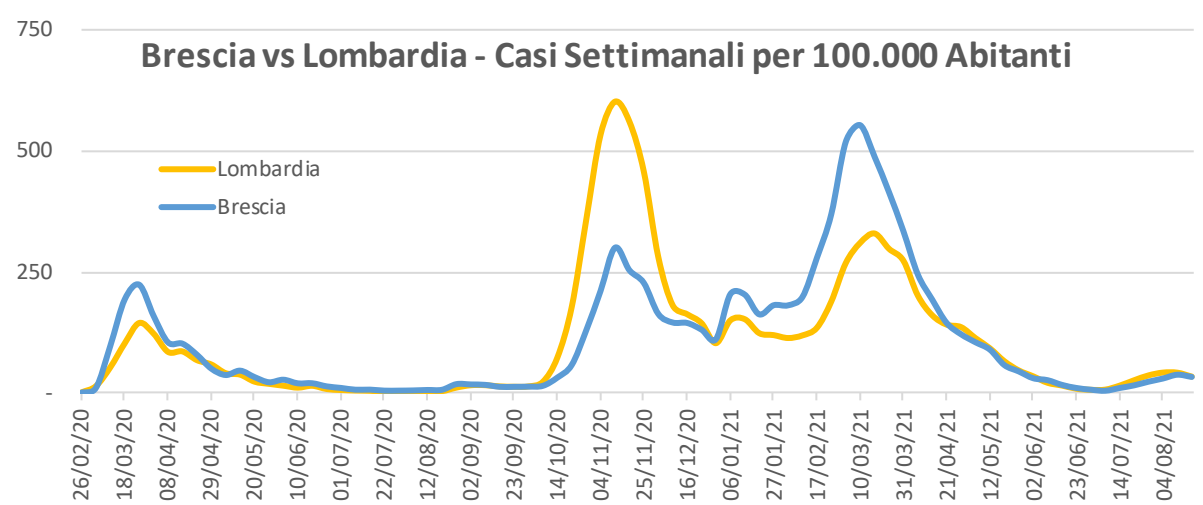

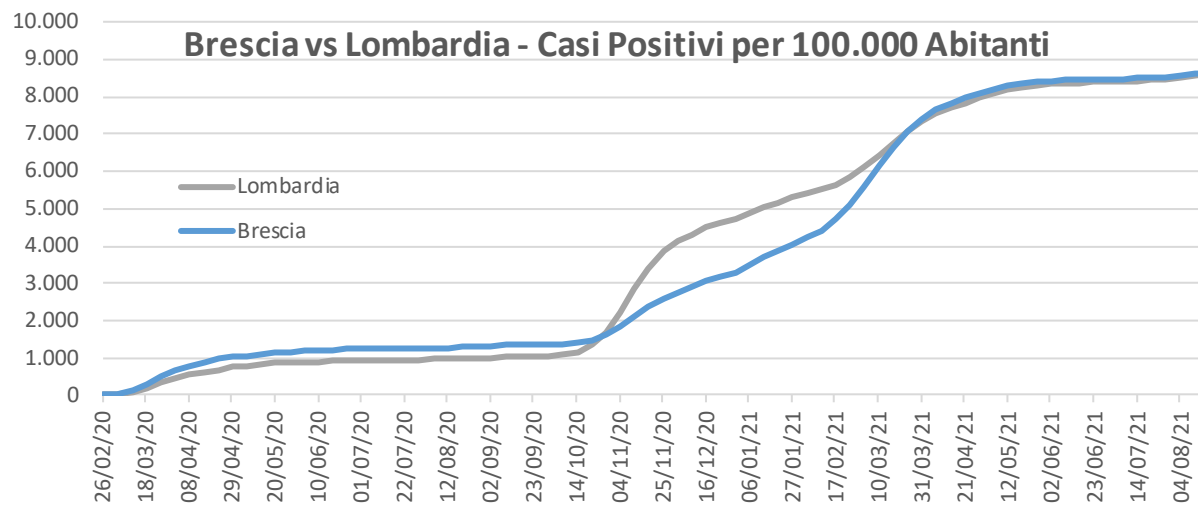

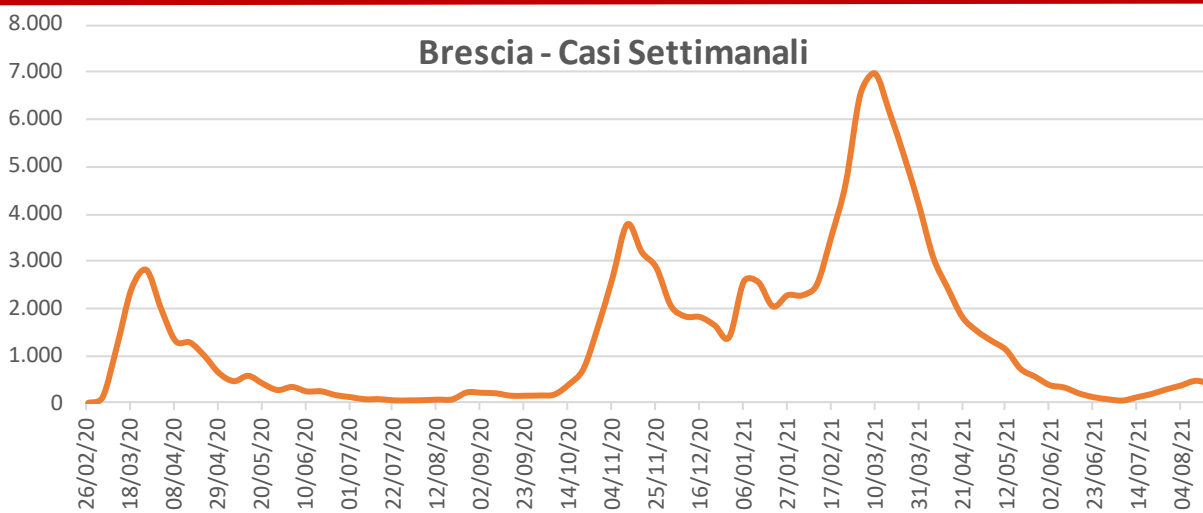

Casi positivi per 100.000 abitanti nelle ultime settimane (valori settimanali)

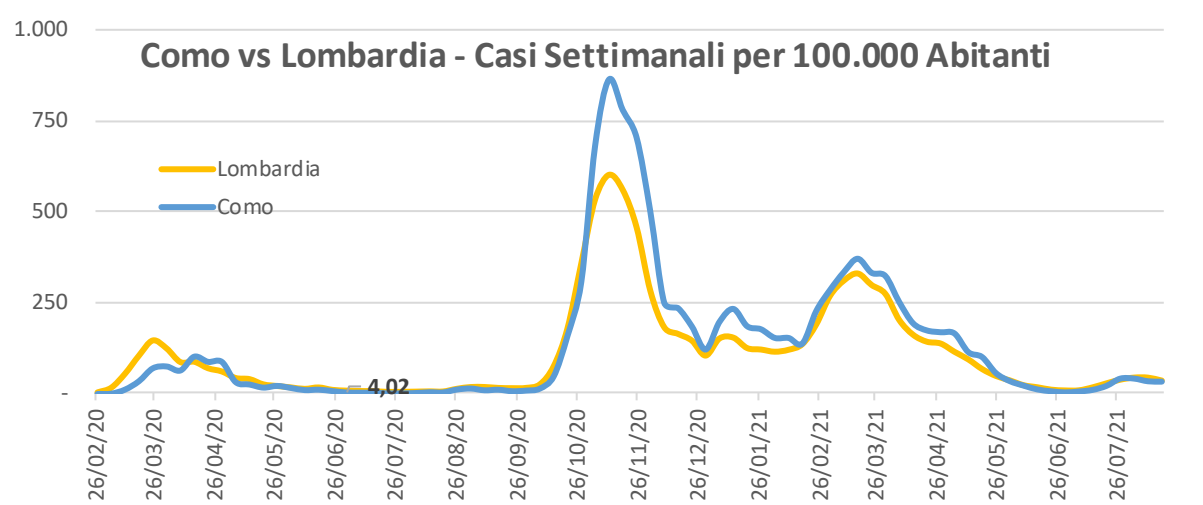

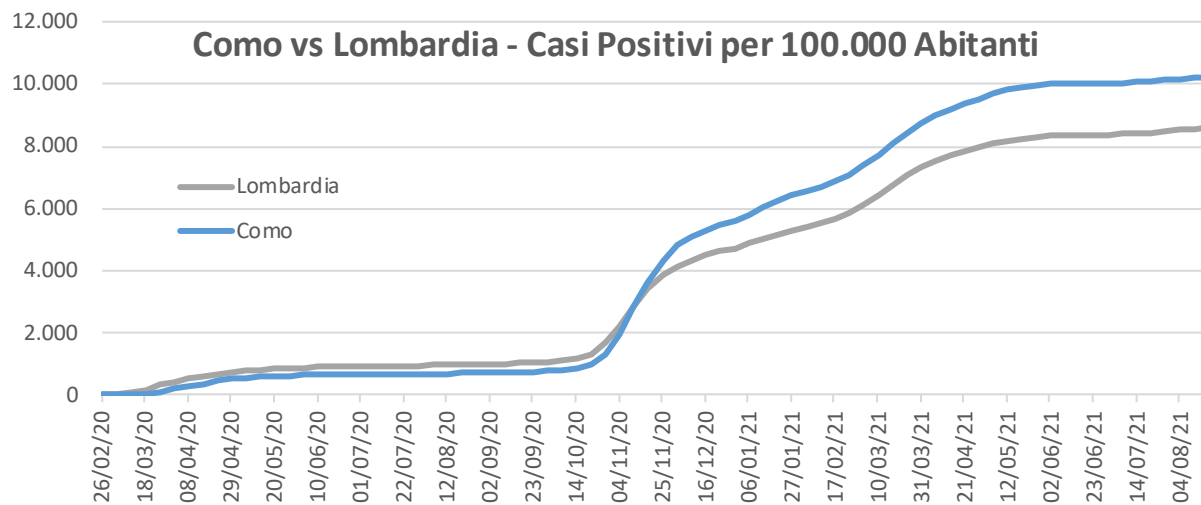

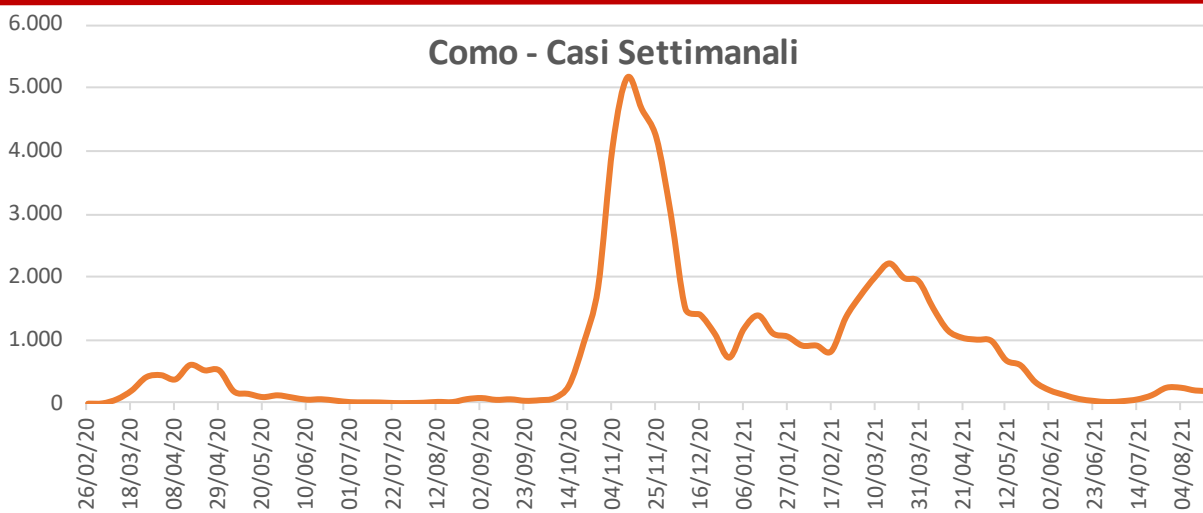

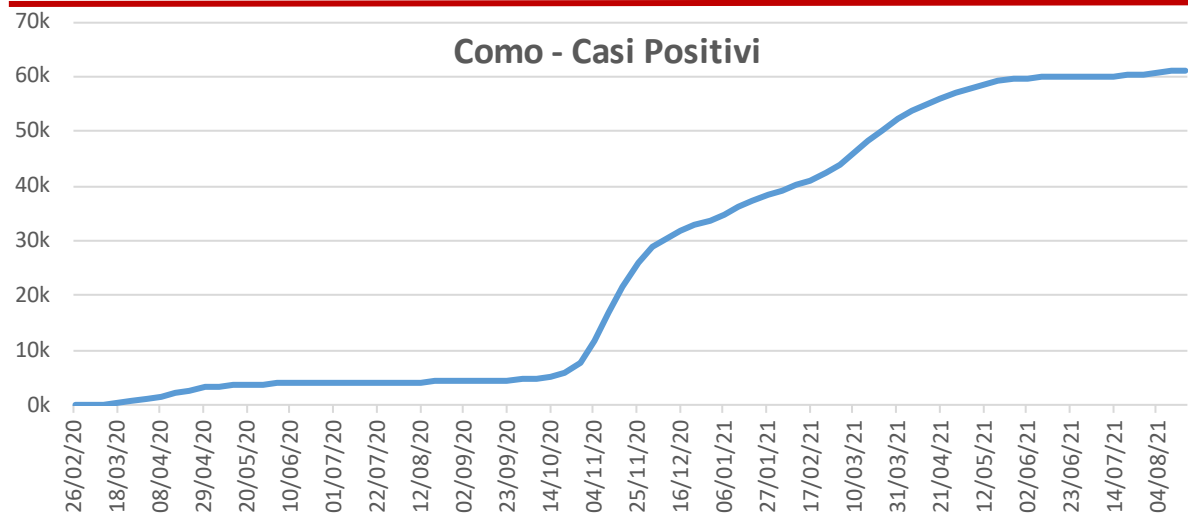

Provincia di Bergamo

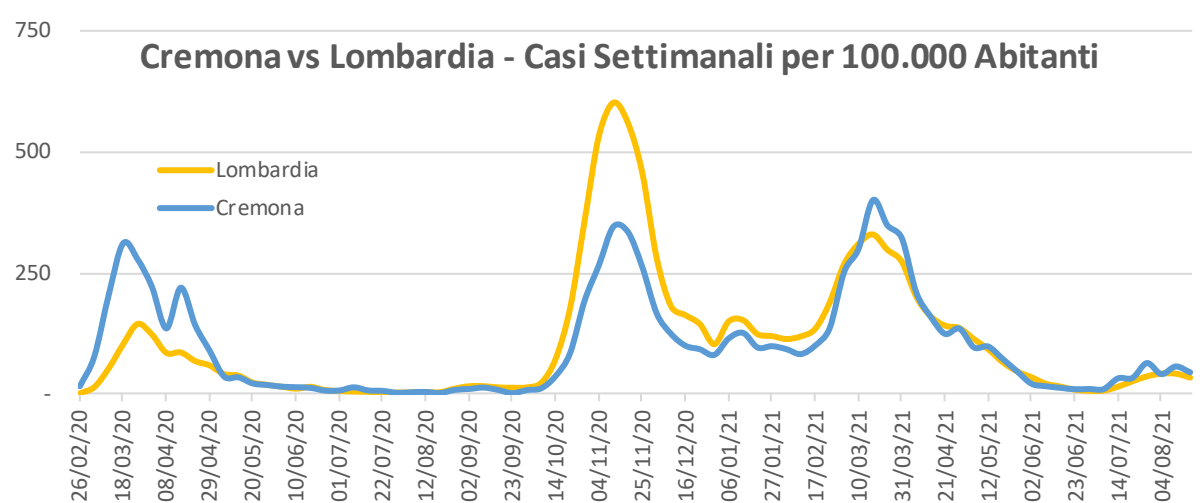

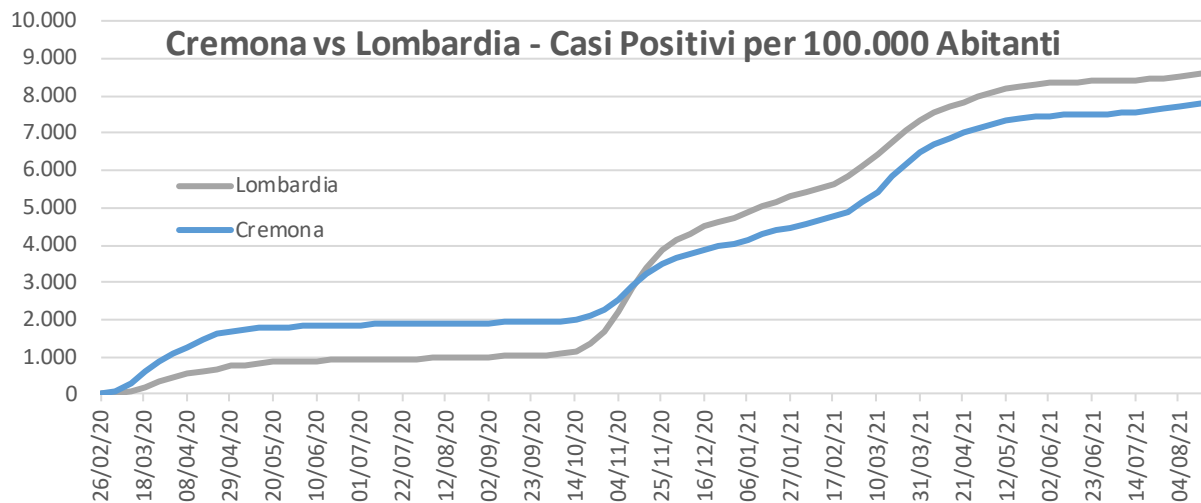

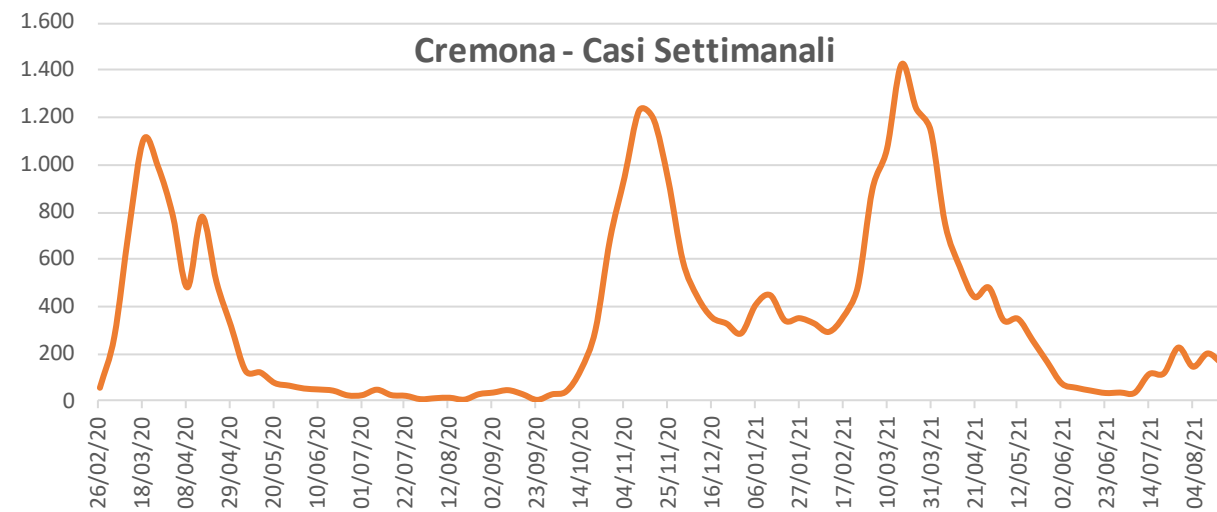

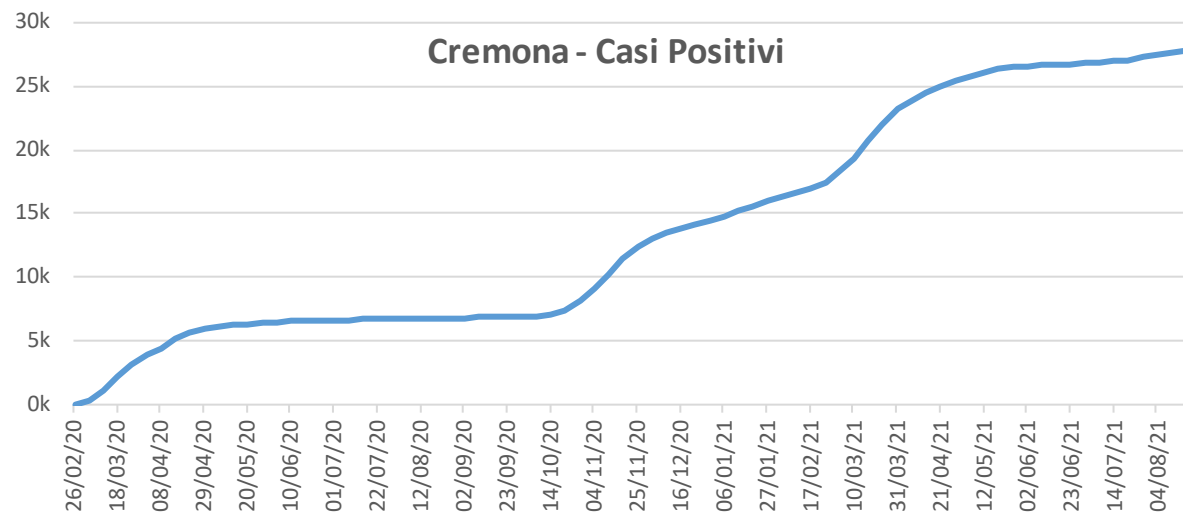

Provincia di Brescia

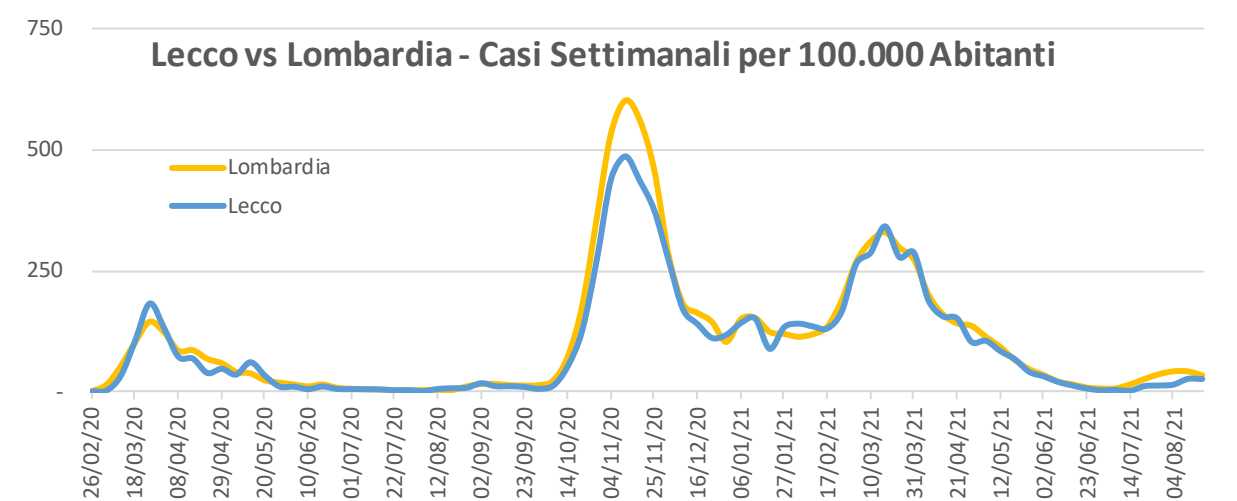

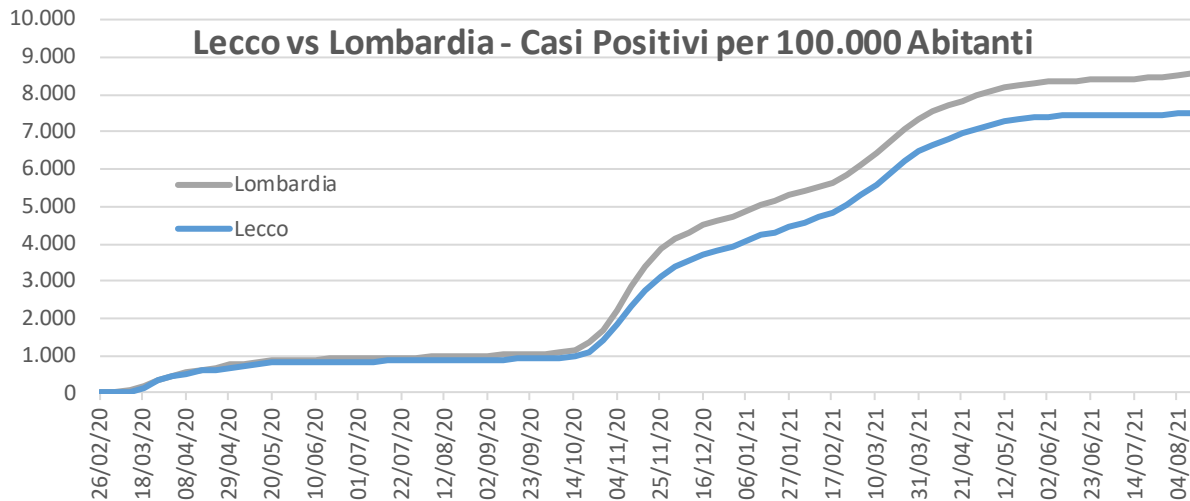

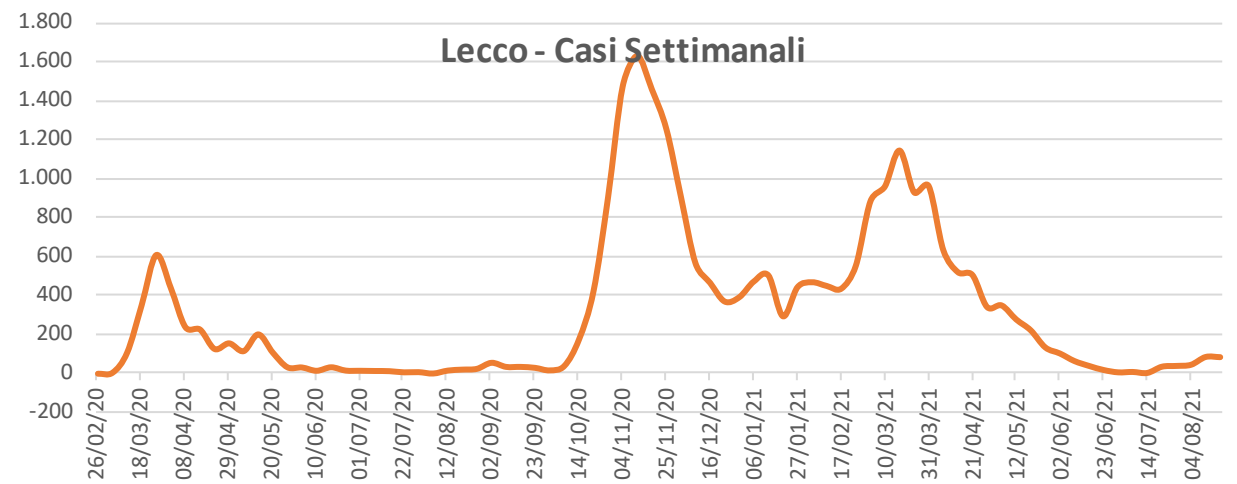

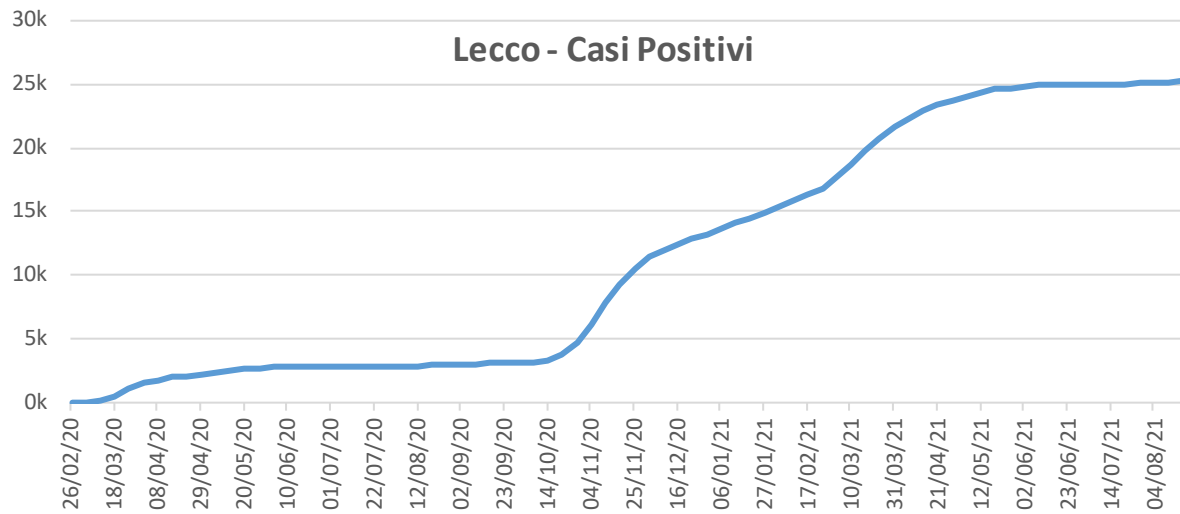

Provincia di Como

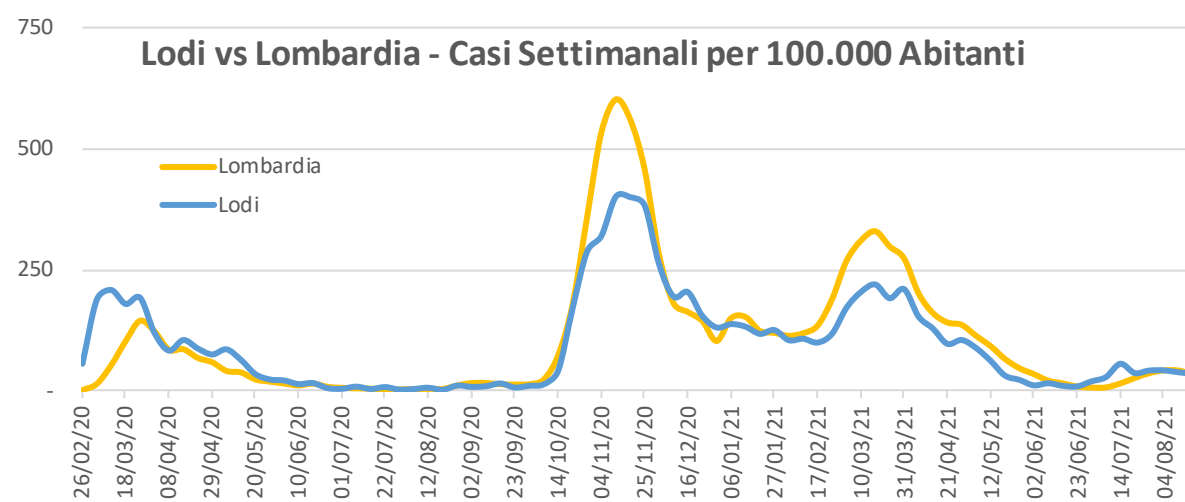

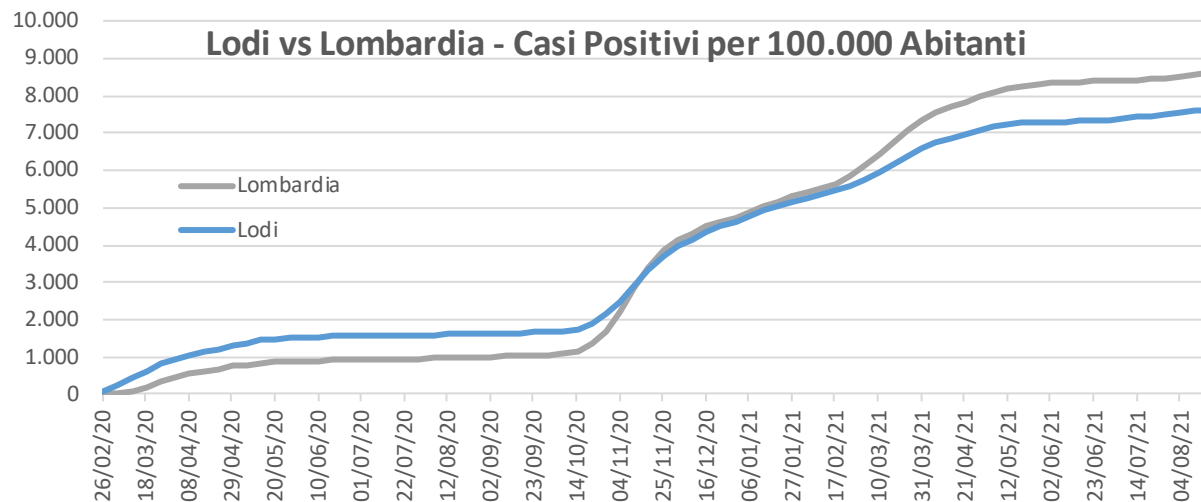

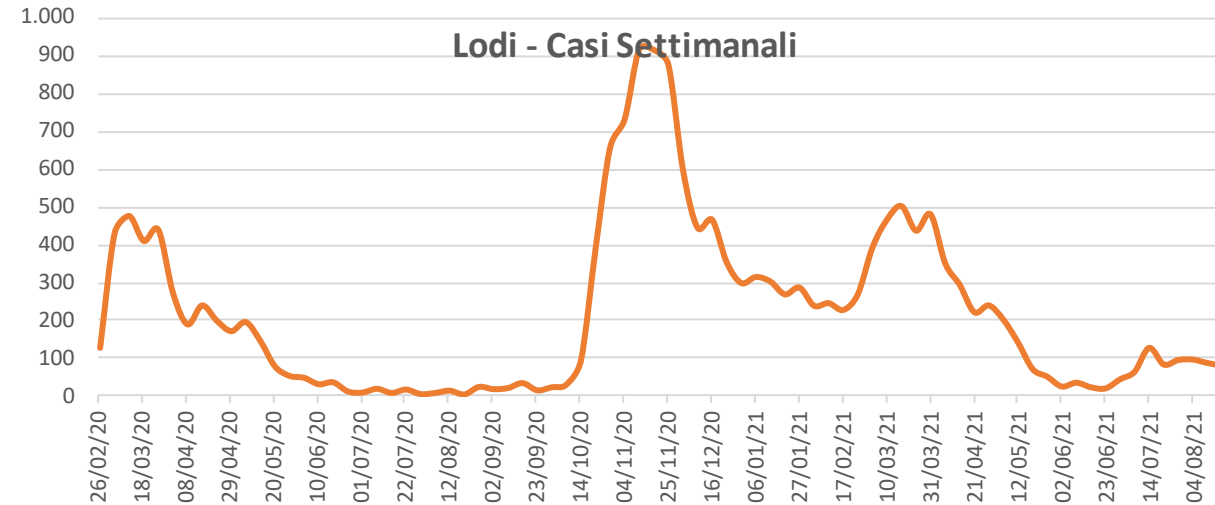

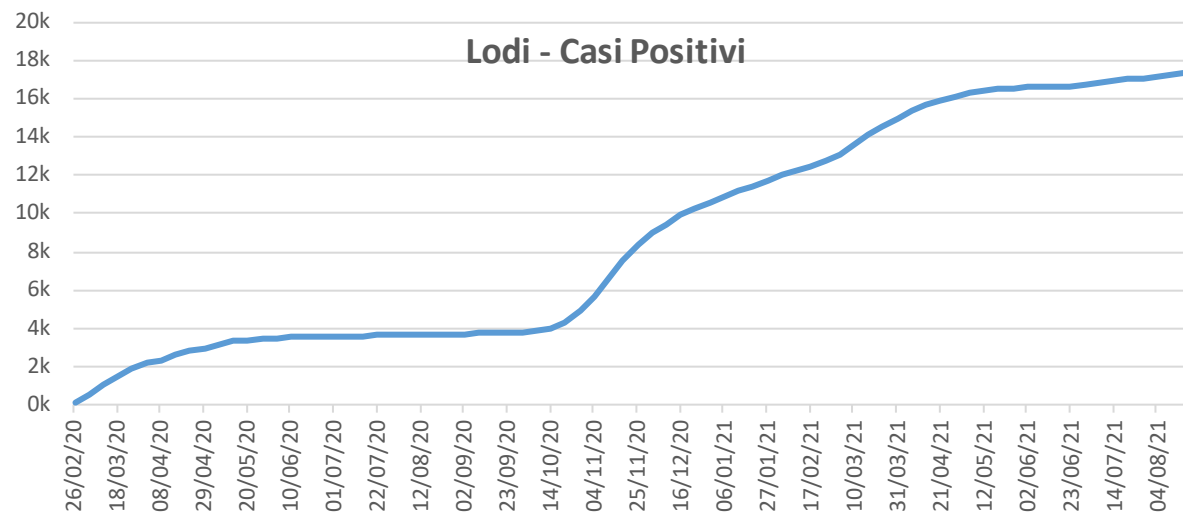

Provincia di Cremona

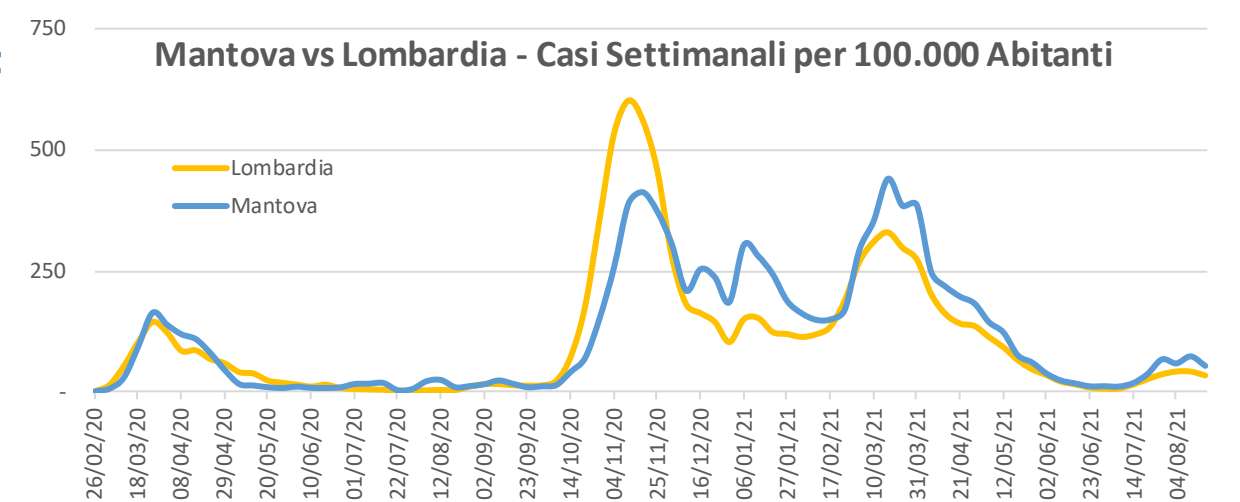

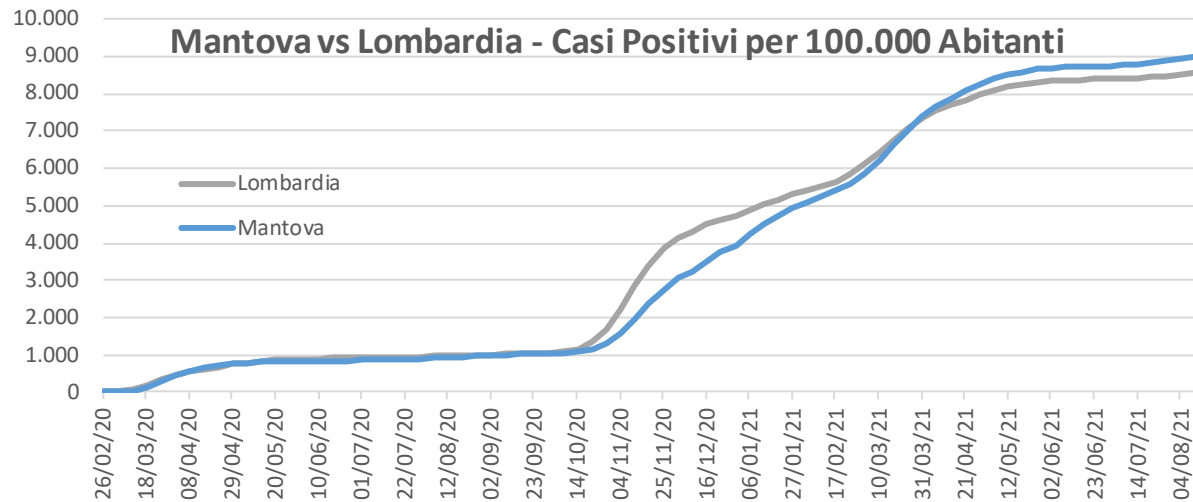

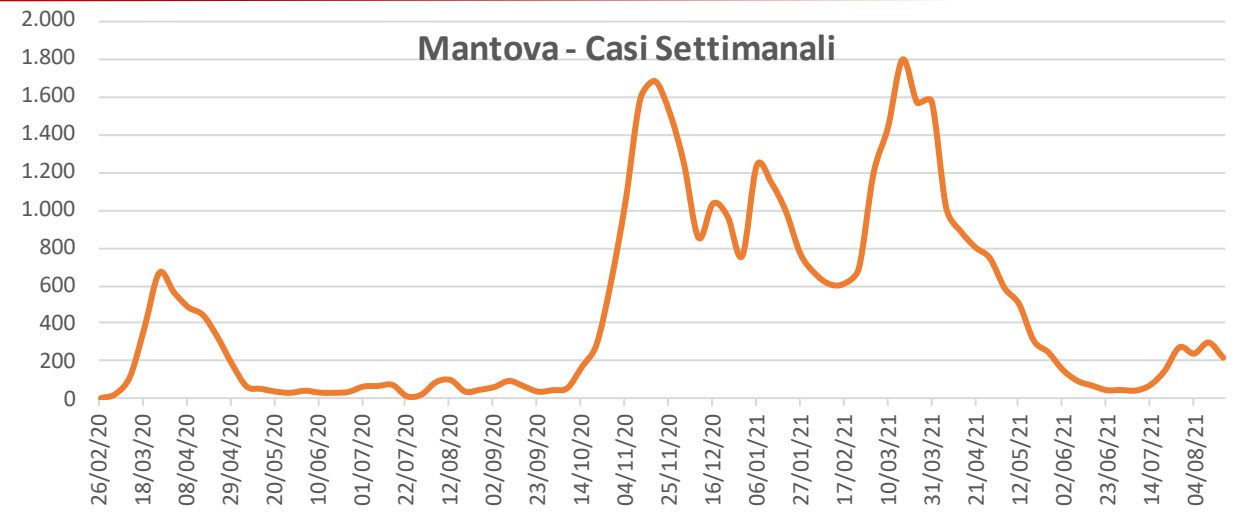

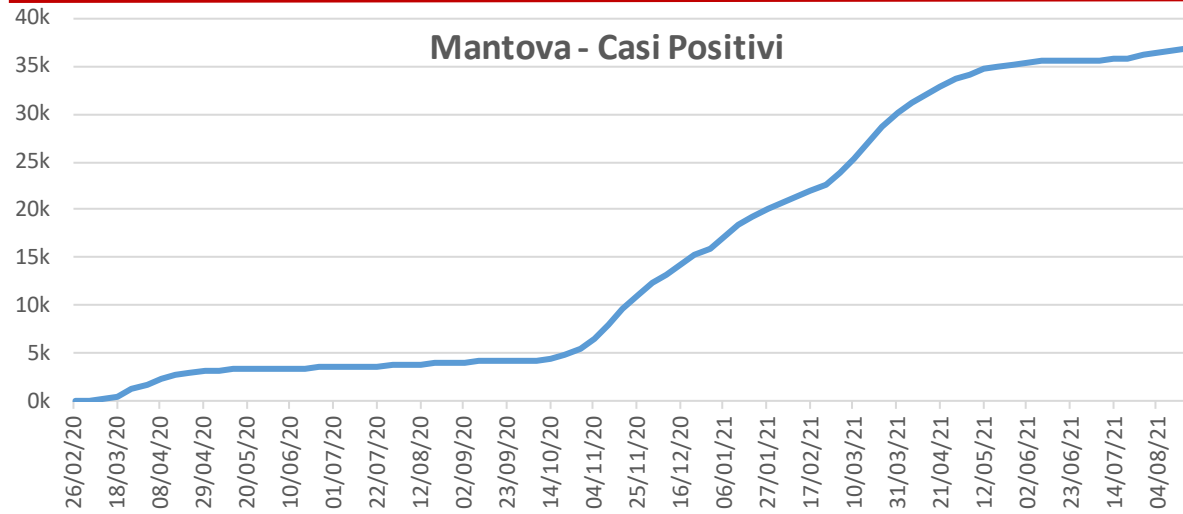

Provincia di Lecco

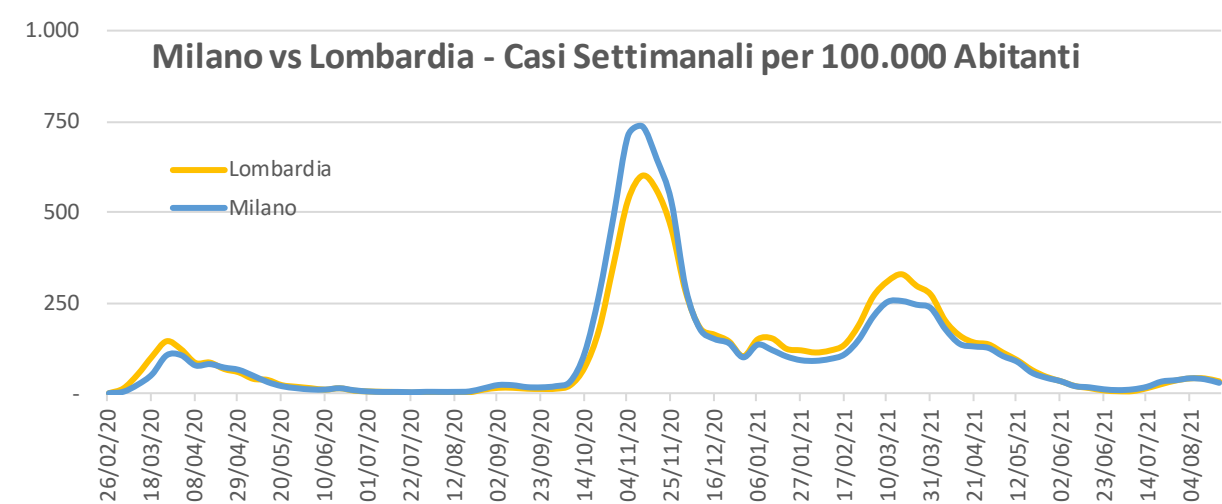

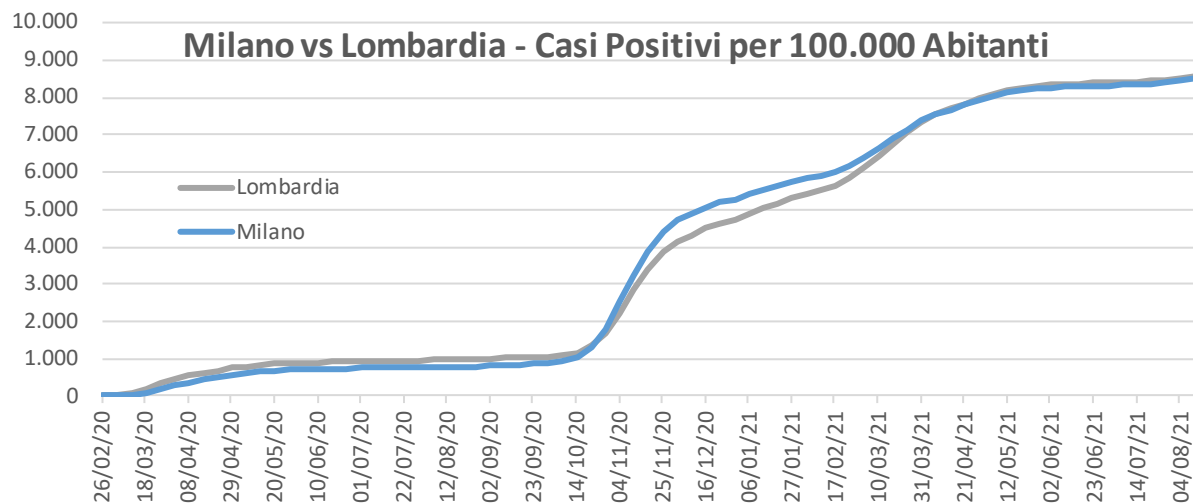

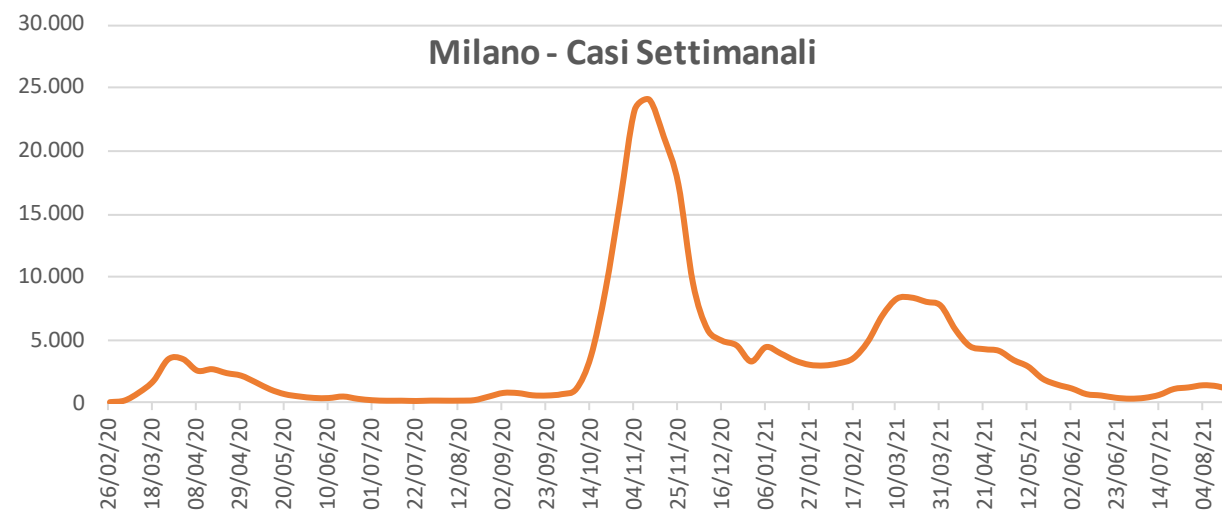

Provincia di Lodi

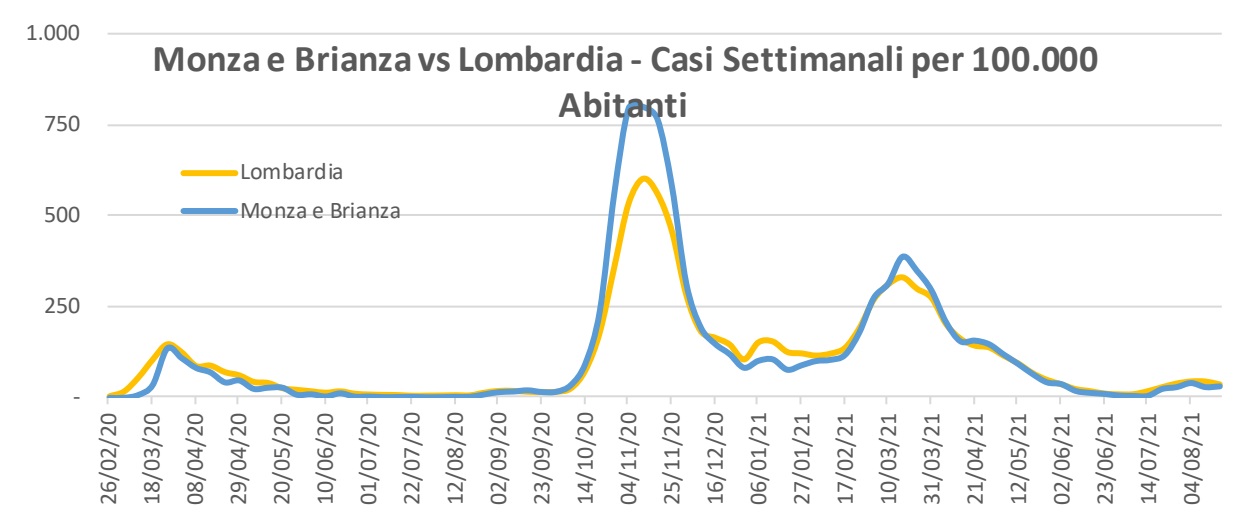

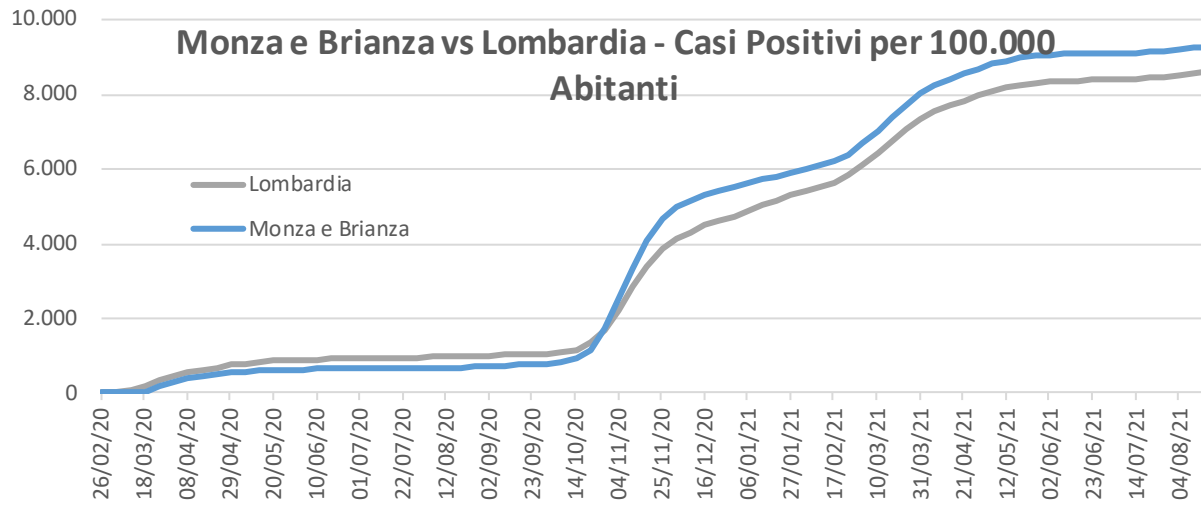

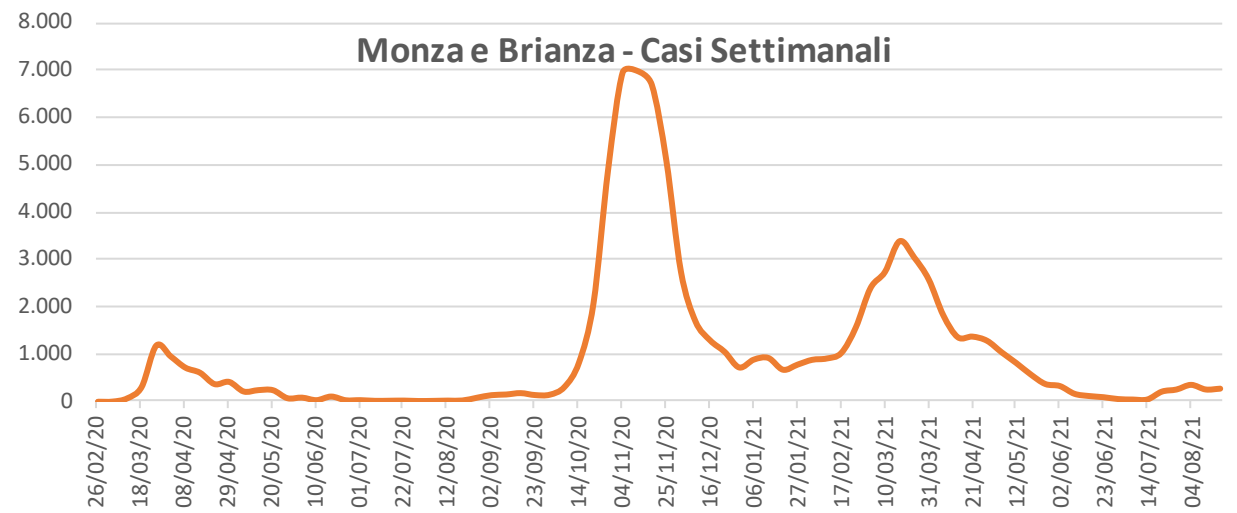

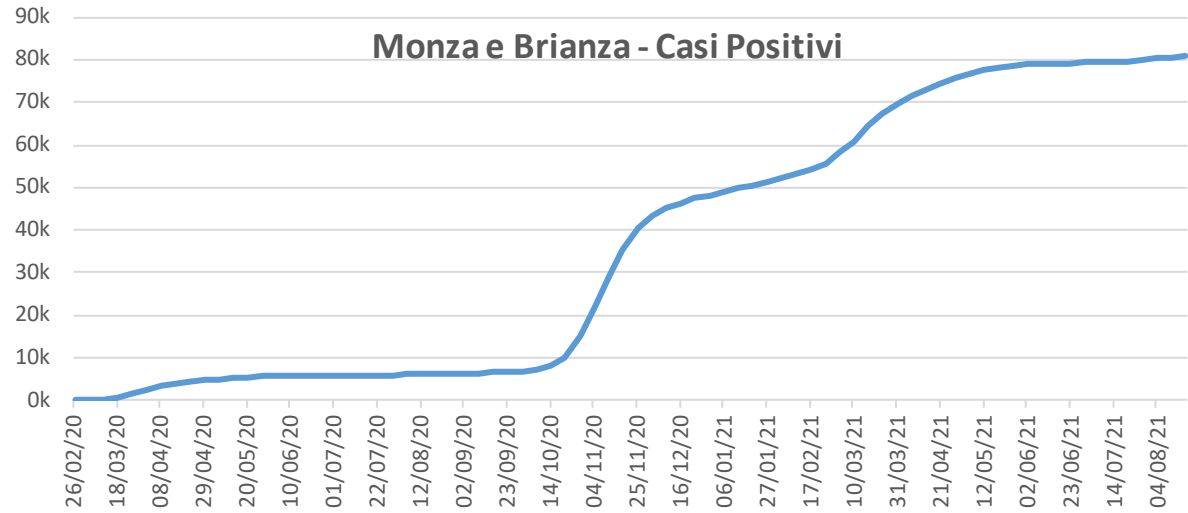

Provincia di Mantova

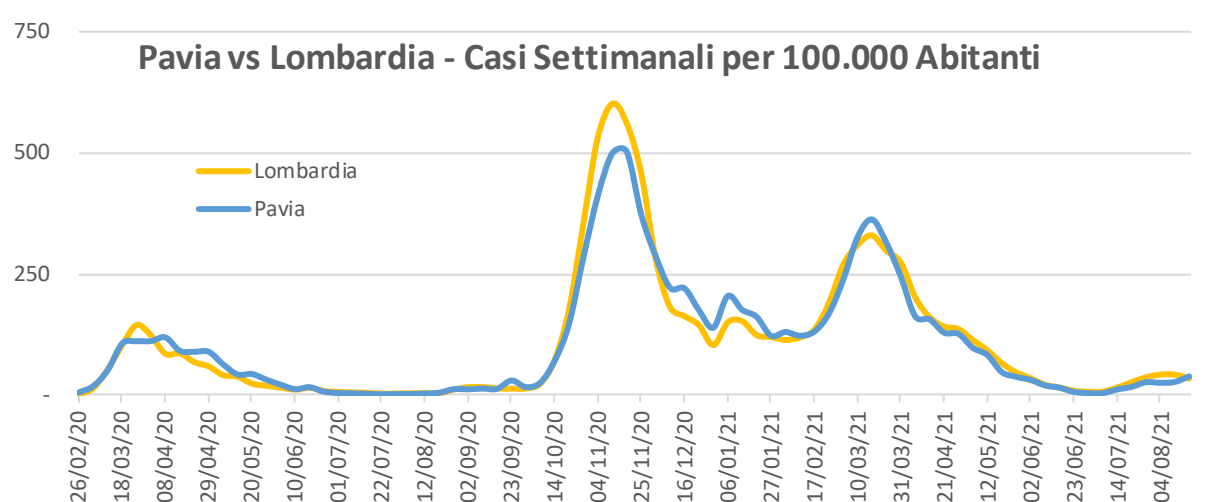

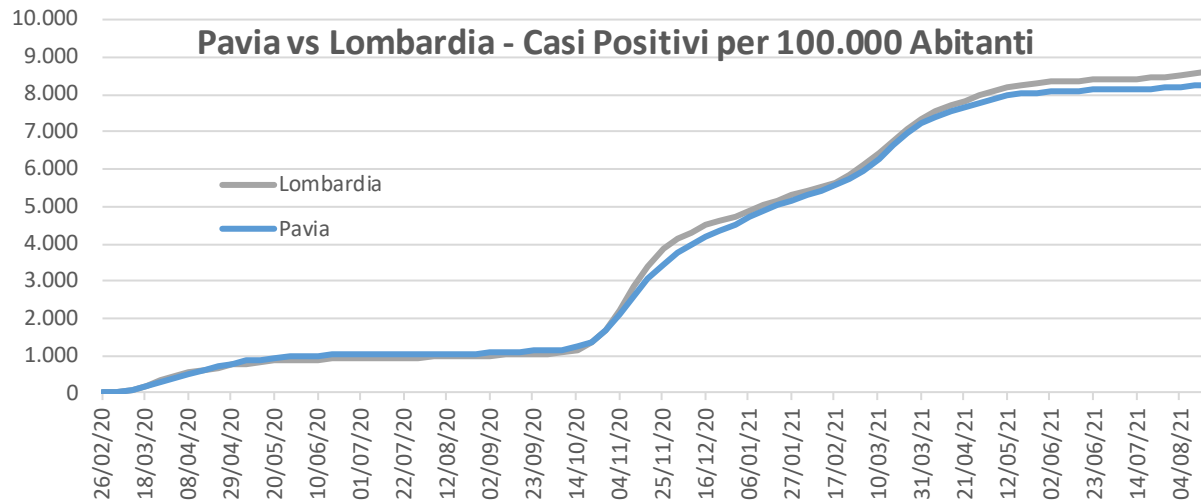

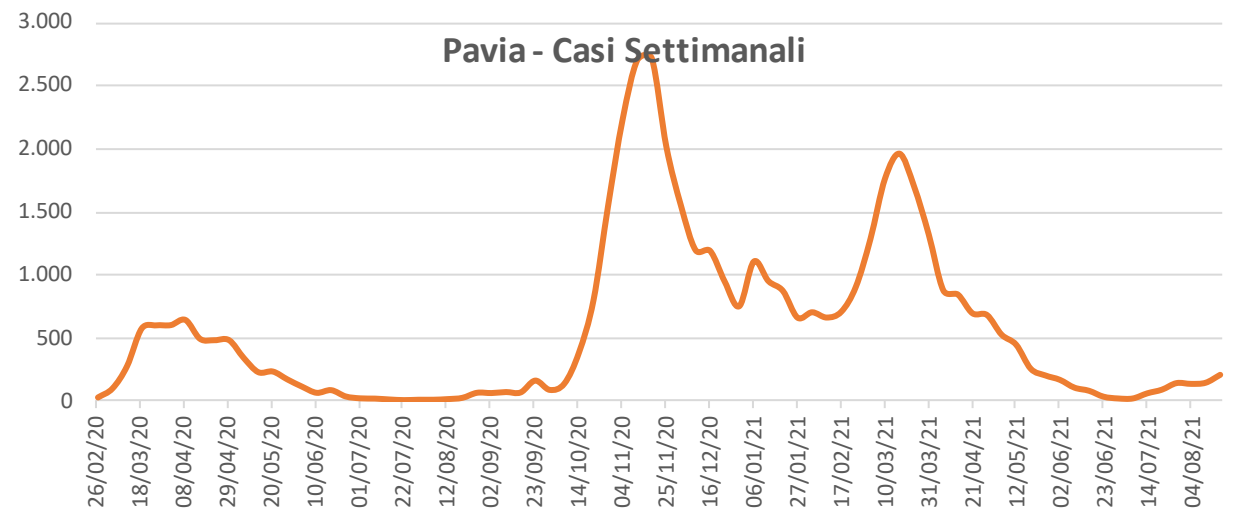

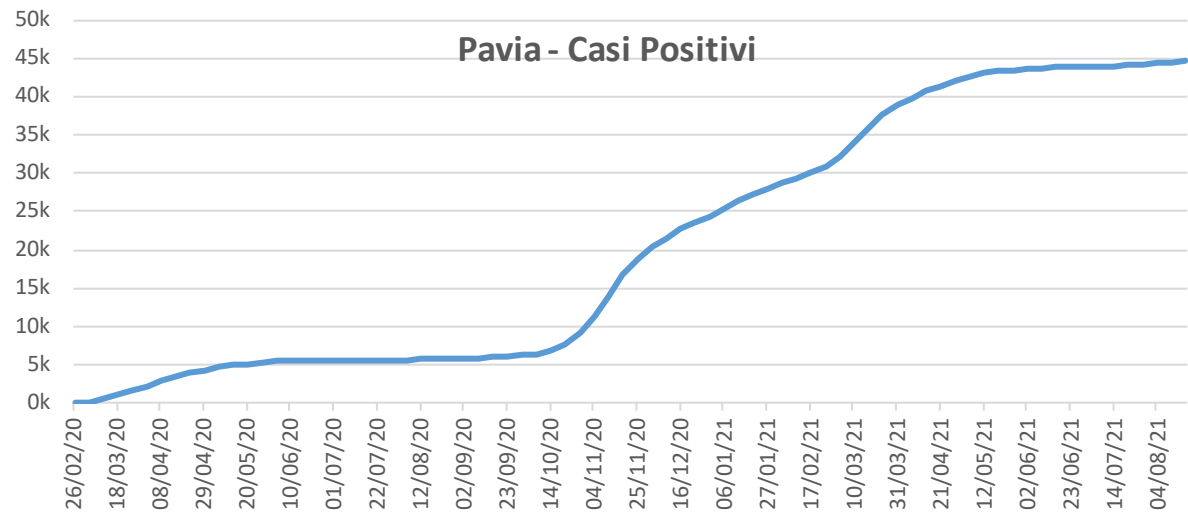

Provincia di Milano

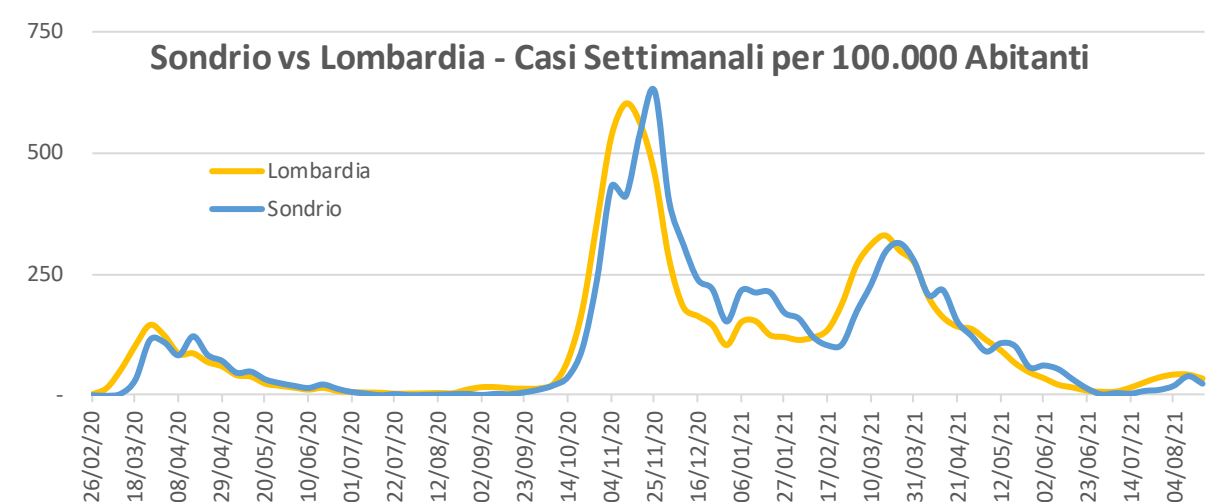

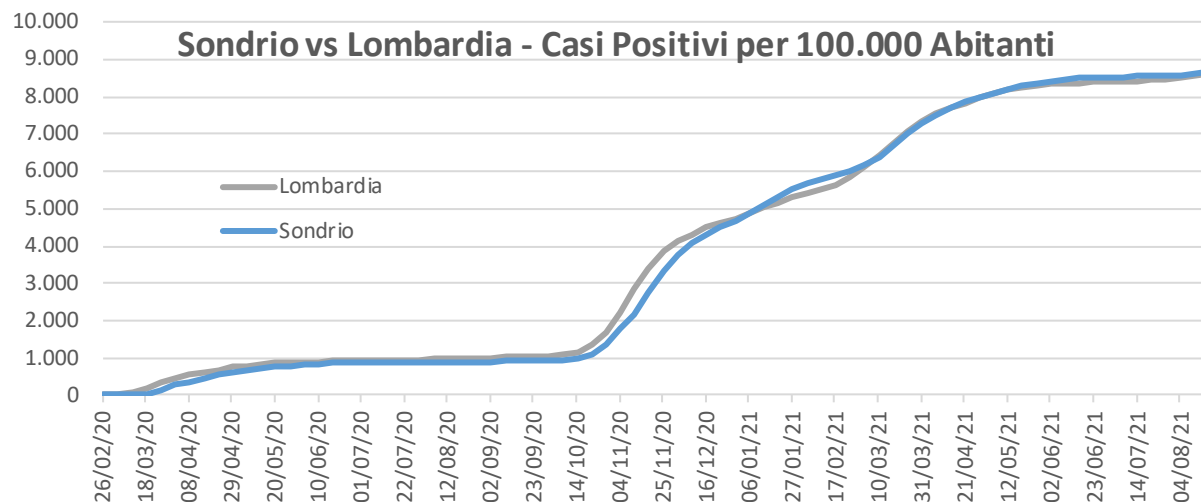

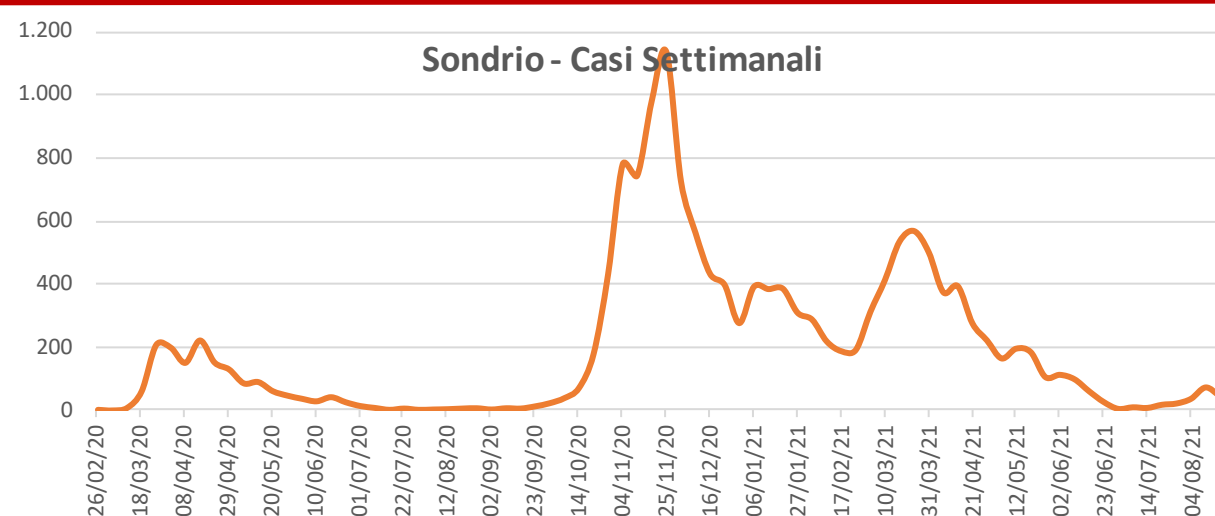

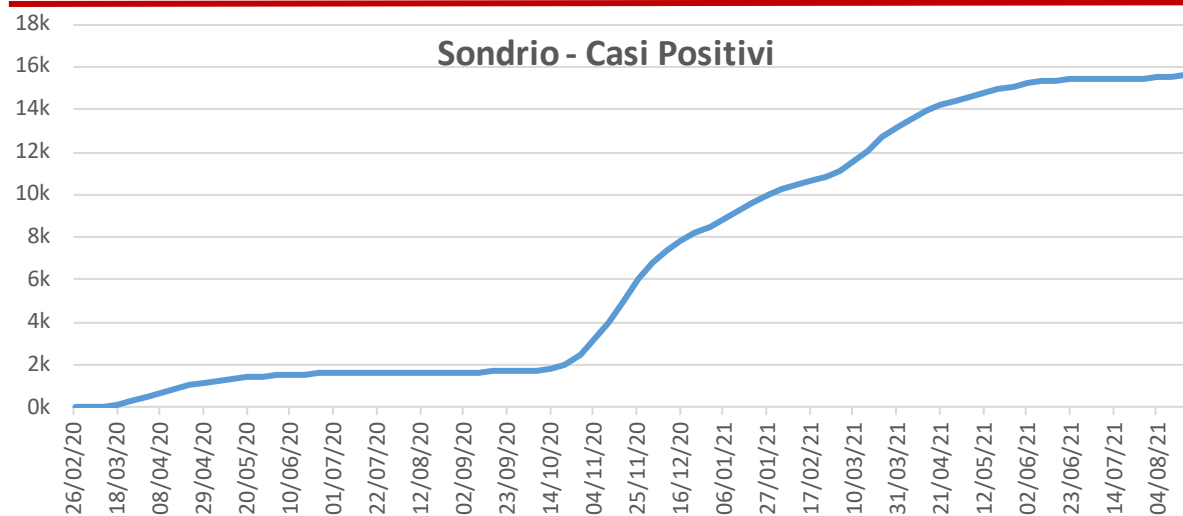

Provincia di Monza e Brianza

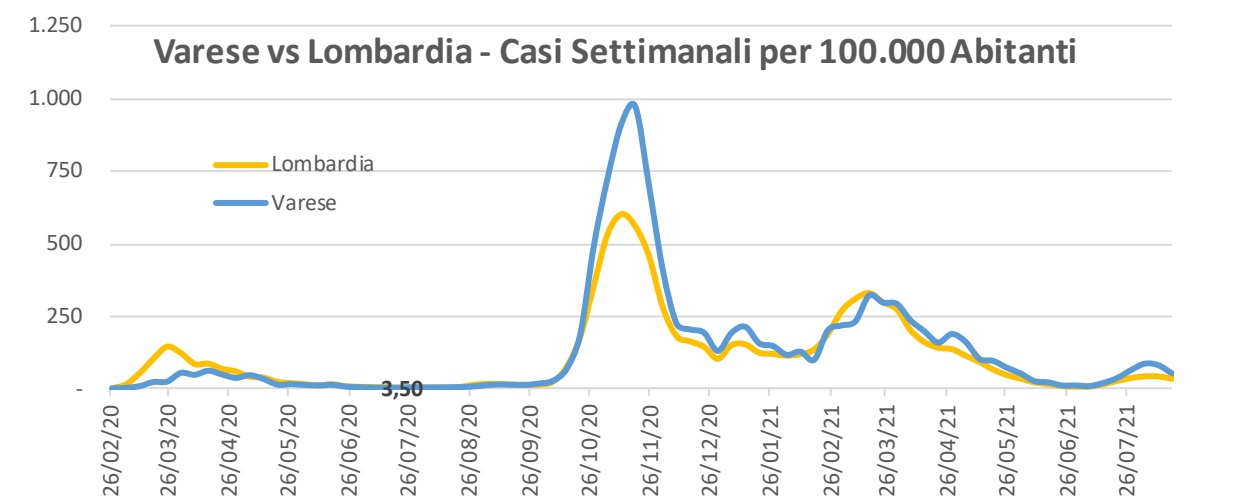

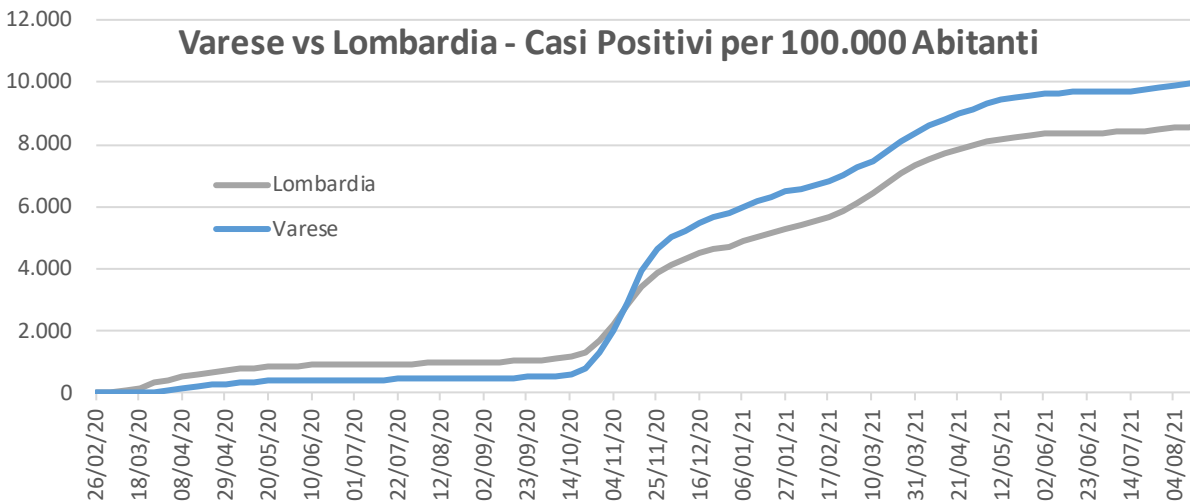

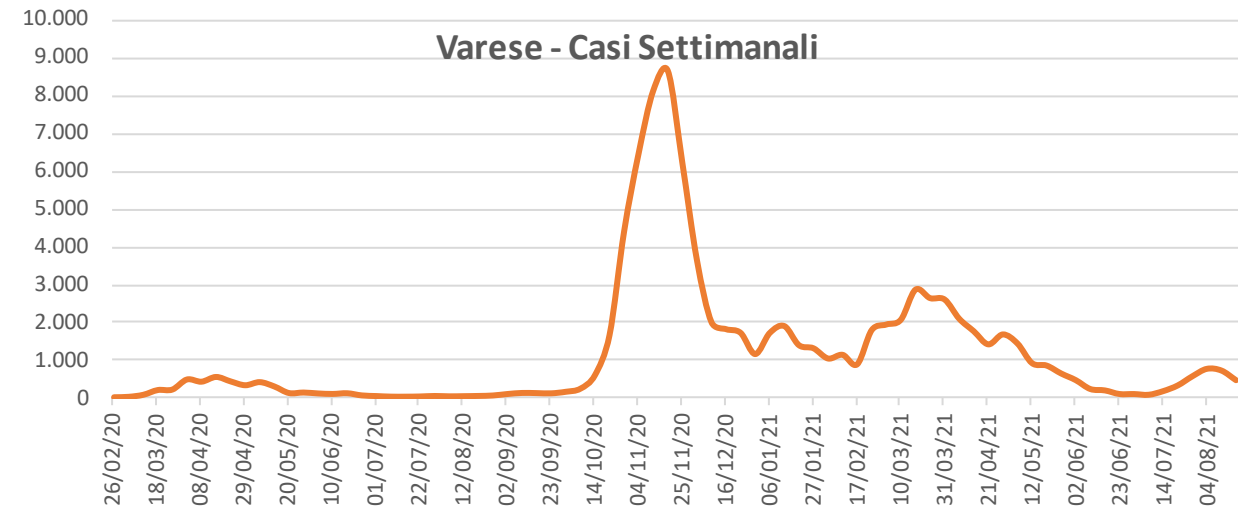

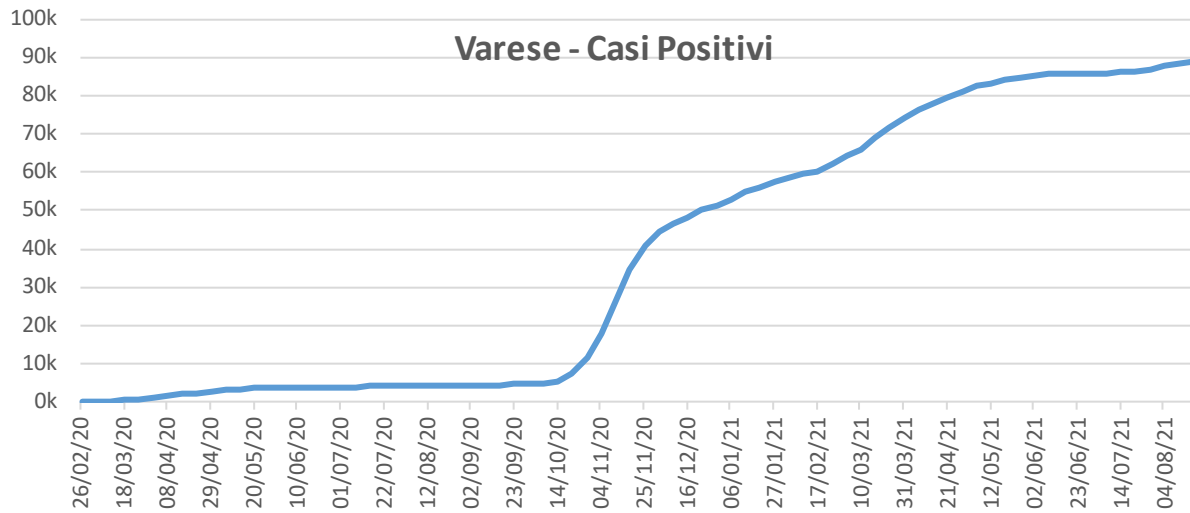

Provincia di Pavia

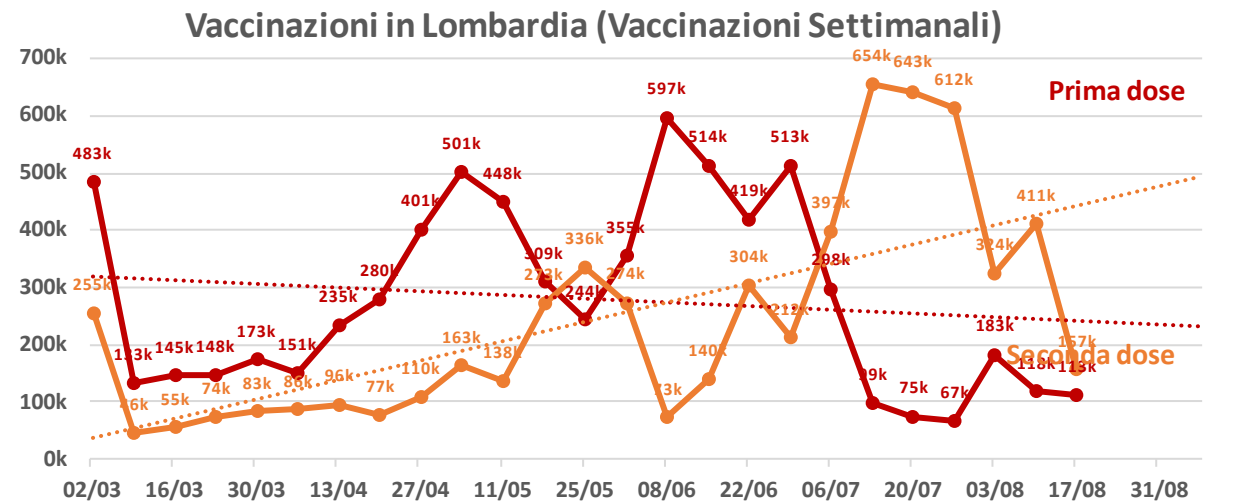

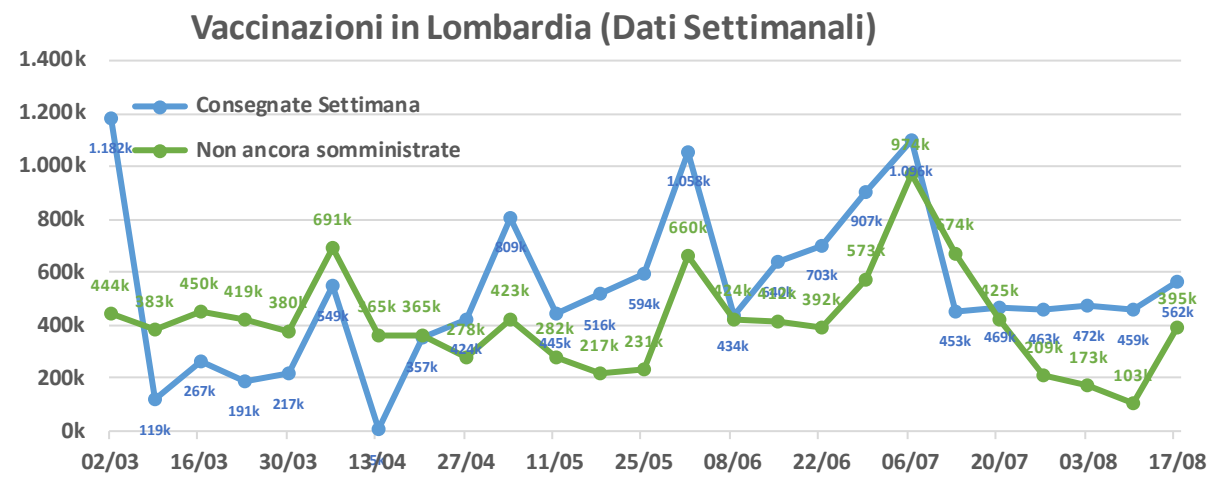

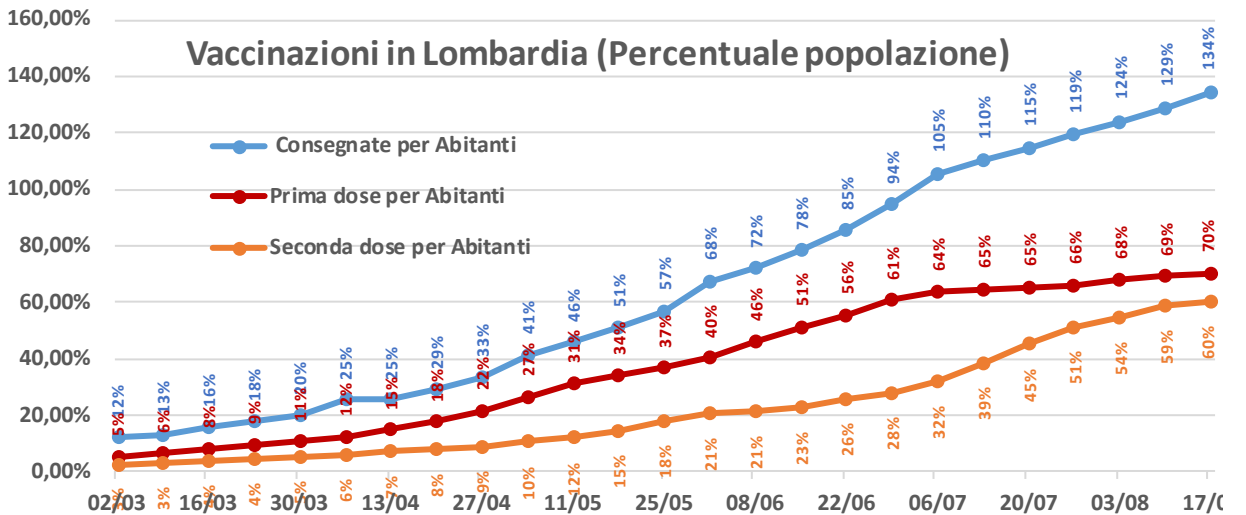

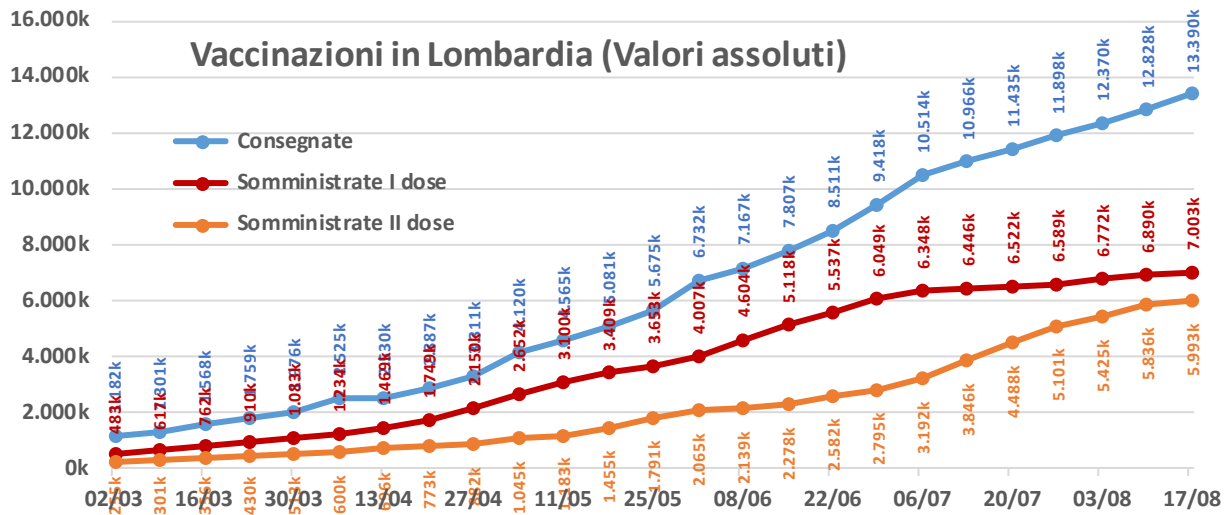

Provincia di Sondrio

Provincia di Varese

Vaccinazioni in Lombardia

Note [1]

- » Il numero dei **casi positivi** di quest'ultima settimana è pari a **3.532**, una diminuzione del 19% rispetto a quanto registrato nelle due settimane precedenti (erano rispettivamente **4.343** e **4.356**)
- » Il numero dei **decessi** (**24**) aumenta del 118% rispetto alla scorsa settimana (**11**) e del 60% rispetto a due settimane fa quando erano **15** (va fatto notare che questo dato è soggetto a delle variazioni dovute probabilmente ad aggiornamenti);
- » Il numero di casi diminuisce mentre aumenta quello dei decessi;
- » Nella settimana che si chiude oggi sono stati comunicati circa **198 mila tamponi**, di cui **86 mila molecolari e 112 mila antigenici**, un numero troppo lontano da quelli registrati prima del mese di maggio in cui i valori si attestavano attorno ai **300 mila tamponi settimanali**. Il tracciamento è fondamentale in questo momento;
- » Aumenta la **percentuale di tamponi positivi** che passa dal 6,6% di settimana scorsa al 7% di questa;
- » Aumentano i ricoverati in terapia intensiva (**4** in più rispetto a settimana scorsa) e aumentano i ricoveri **NON** in terapia intensiva (sono **25** in più rispetto alla scorsa settimana).

Note [2]

- » Due province lombarde superano la soglia dei 50 casi settimanali ogni 100.000 abitanti: si tratta di Mantova (che registra circa 52 casi ogni 100.000 abitanti) e Varese (51 casi ogni 100.000 abitanti). La media lombarda è di 35 casi ogni 100.000 abitanti!
- » Osservando l'andamento delle ultime quattro settimane, le province lombarde si possono dividere nei seguenti gruppi:
 - › **Como, Cremona, Lodi, Mantova, Milano e Varese** registrano una diminuzione massima del 30%;
 - › **Bergamo, Brescia, Monza e Pavia** registrano una crescita inferiore al 50%;
 - › **Lecco e Sondrio** registrano una crescita uguale o superiore al 100%
- » Per quanto riguarda le vaccinazioni, in questa ultima settimana risulta siano state consegnate circa **562mila** dosi e ne sono state utilizzate più di **270mila** (113mila prime dosi, 157mila seconde dosi); ne rimangono ancora più di **395mila** da somministrare.
